Advances In Powder Metallurgy Particul:

Advances in powder metallurgy H. Danninger, C. Gierl-Mayer, 2013-08-31 Ferrous powder metallurgy PM makes up the majority of powder metallurgy products with regard to tonnage Improving performance is the main trend for pressed and sintered parts in particular the introduction of cost effective alloy elements such as Cr and Mn Furthermore much can be gained in ferrous PM by elaborate secondary operations In metal injection moulding MIM products there is a clear trend towards increasingly complex shapes and micro sized parts PM tool steels offer a much finer and fully isotropic microstructure compared to their wrought counterparts and the carbide content may be much higher resulting in excellent application properties
