**Monte Carlo Simulation for Advanced Option Pricing** Jason Fink, 2005. Finance students at the undergraduate and MBA levels are increasingly in possession of significant mathematical skills, corresponding with the rise in cross-listings of courses between mathematics and finance departments. This increase in mathematical skill has opened the door for the Black-Scholes model to be presented to advanced undergraduate and MBA students. However, although these students can grasp the weaknesses of the Black-Scholes model, they are often not mathematically advanced enough to handle more realistic option pricing models. We

demonstrate how Monte Carlo simulation may be employed to open the field of advanced option pricing to students without requiring any more mathematical knowledge than basic calculus and intermediate statistics As an example we demonstrate how to simulate option values when the underlying process follows Heston's stochastic volatility process and motivate the example by demonstrating the significant improvement of a properly specified stochastic volatility model over the Black Scholes model

**Exotic Option Pricing and Advanced Lévy Models** Andreas Kyprianou, Wim Schoutens, Paul Wilmott, 2006-06-14 Since around the turn of the millennium there has been a general acceptance that one of the more practical improvements one may make in the light of the shortfalls of the classical Black Scholes model is to replace the underlying source of randomness a Brownian motion by a Lévy process Working with Lévy processes allows one to capture desirable distributional characteristics in the stock returns In addition recent work on Lévy processes has led to the understanding of many probabilistic and analytical properties which make the processes attractive as mathematical tools At the same time exotic derivatives are gaining increasing importance as financial instruments and are traded nowadays in large quantities in OTC markets The current volume is a compendium of chapters each of which consists of discursive review and recent research on the topic of exotic option pricing and advanced Lévy markets written by leading scientists in this field In recent years Lévy processes have leapt to the fore as a tractable mechanism for modeling asset returns Exotic option values are especially sensitive to an accurate portrayal of these dynamics This comprehensive volume provides a valuable service for financial researchers everywhere by assembling key contributions from the world's leading researchers in the field Peter Carr Head of Quantitative Finance Bloomberg LP This book provides a front row seat to the hottest new field in modern finance options pricing in turbulent markets The old models have failed as many a professional investor can sadly attest So many of the brightest minds in mathematical finance across the globe are now in search of new more accurate models Here in one volume is a comprehensive selection of this cutting edge research Richard L Hudson former Managing Editor of The Wall Street Journal Europe and co author with Benoit B Mandelbrot of The Mis Behaviour of Markets A Fractal View of Risk Ruin and Reward
