Introduction to Dynamics and Control in Mechanical Engineering Systems Cho W. S. To,2016-05-02 One of the first books to provide in depth and systematic application of finite element methods to the field of stochastic structural dynamics The

parallel developments of the Finite Element Methods in the 1950 s and the engineering applications of stochastic processes in the 1940 s provided a combined numerical analysis tool for the studies of dynamics of structures and structural systems under random loadings In the open literature there are books on statistical dynamics of structures and books on structural dynamics with chapters dealing with random response analysis However a systematic treatment of stochastic structural dynamics applying the finite element methods seems to be lacking Aimed at advanced and specialist levels the author presents and illustrates analytical and direct integration methods for analyzing the statistics of the response of structures to stochastic loads The analysis methods are based on structural models represented via the Finite Element Method In addition to linear problems the text also addresses nonlinear problems and non stationary random excitation with systems having large spatially stochastic property variations

Control of Structures U. Leipholz, M. Abdel-Rohman, 2011-11-25 This book is an outgrowth of several years of teaching and research of the two authors in the field of structural dynamics and control The content of the book is based on structural dynamics classical and modern control theory and involves also recent developments that took place with respect to the control of systems with distributed masses It is hoped that the book will serve the researcher and the practicing engineer in the areas of civil mechanical and aeronautical engineering It may also be of interest to applied mathematicians and to physicists There is no question that the book can be used as a reference book for advanced courses in the above mentioned areas The numerous examples will provide students with the necessary material for exercising themselves and for self studying Thanks are due to Mrs Cynthia Jones for preparing patiently and competently the typescript of the book The services of Mrs Linda Strouth Solid Mechanics Division University of Waterloo rendered in producing the camera ready copy of the book with great skill and devotion are gratefully acknowledged Special thanks go to Mr Ir Ad C Plaizier at Martinus Nijhoff Dr W Junk who with much understanding and enthusiasm supervised the production of the book as Publisher May the readers of it enjoy it and may they have the feeling of having gained something in turning to it and using it
