Modern Methods in Neurosurgery Wendelin Walter, Mathias Brandt, Mario Brock, Margareta Klinger, 2012-12-06 This 16th volume of Advances in Neurosurgery contains a selection of papers presented at the 38th Annual Meeting of the German Society of Neurosurgery held in Munster on 3-6 May 1987 The program committee had to choose these contributions from a total of 161 presentations I am very much obliged to the members of the committee who contributed their experience and effort to the organization of the scientific program Prof Dr R A Frowein Prof Dr W J Bock Prof Dr E Kazner Prof Dr G Lausberg Prof Dr M Klinger and Prof Dr M Brandt The aim of the Meeting was to exchange experiences regarding modern diagnostic and therapeutic achievements The first main topic was new technical methods in neurosurgery Refinements in laser technology were introduced different laser devices have been recognized as useful tools in microsurgery and some peripheral nerve problems The Ca vitron ultrasonic aspirator has proven its value in a great variety of intracranial and spinal tumors within a few years Its technical advance is impressively demonstrated by some of the papers in this book With growing experience we have recognized the great value of these additional instruments in limited surgical fields and learned not to overestimate them in the hands of a skilled neurosurgeon

Evaluation and Installation of Surgical Laser Systems David B. Apfelberg, 2012-12-06 The advent in the 1960s of the unique and exciting new form of energy called laser brought to medicine a marvelous tool that could accomplish new treatments of previously untreatable disorders as well as improved treatment of mundane problems This brilliant form of light energy is many times more powerful than the energy of the sun yet can be focused microscopically to spot sizes as small as 30 microns Lasers can be directed into seemingly inaccessible areas by mirrors or fiberoptic cables or can be directly applied into sensitive areas such as the retina without damage to intervening structures There has been a rapid proliferation in the use of lasers in all surgical specialties Starting with bold ideas and experiments of thought leaders in each specialty the application of lasers has evolved into commonplace usage Beginning with the era when laser presentations and publications were an oddity now nearly all specialty areas have whole

sections of meetings or journals devoted exclusively to laser usage Laser specialty societies within a specialty have developed and residency training programs routinely instruct trainees in laser techniques Basic science and clinical experimentation has supported laser knowledge Laser usage has also become international Newer wavelengths and accessories have added to the armamentarium of laser usage Despite the rapid growth in laser interest no single source exists to instruct the many new laser users in proper safe and effective use of this new modality

Brain Oncology Biology, diagnosis and therapy M. Chatel,F. Darcel,J. Pecker,2012-12-06 The International Meeting on Brain Oncology in Rennes was organised in honor of Jean Pecker to pay tribute to his contribution to the development of neurological sciences and to take stock of the current state of knowledge on brain tumors a domain in which the role of

neurosurgery has been and will continue to be primordial During the two day conference the major themes of brain oncology studies both fundamental and clinical were examined oncogenesis tumoral markers and immunology metabolic and diagnosis imaging prognostic factors and therapeutic strategies The large number and high quality of participations resulted in a genuinely synthetic view of current advances in research of which this book presents the essentials We have attempted both to preserve the richness of scientific exchanges which occurred and to publish a great many oral and poster communications The book respects the organization of conference sessions and thus reflects the importance accorded to glial tumor studies This may seem disproportionate given their frequency of occurrence in proportion to total numbers of intracranial tumor processes but their gravity and quasi total resistance to current therapeutic methods are ample justification Moreover this is the domain in which hopes of progress are beginning to appear and it is becoming possible to envisage treatment based on recently established fundamental knowledge Handbook of Clinical Neurology P.
