Curtis,2003-10-30 This book presents a new approach to introductory graduate courses on atomic structure The author s approach utilizes conceptually powerful semiclassical modeling methods and demonstrates the degree to which the Maslov indexed EBK quantization elucidates the quantum mechanical formulation of level energies and lifetimes It merges this with an update and extension of semiempirical data systematizations developed by Bengt Edl n to describe complex atoms and adapts them to include the specification of lifetimes The text emphasizes the historical basis of the nomenclature and methodologies of spectroscopy However interaction mechanisms are presented deductively based on quantum mechanical and field theoretical models rather than tracing their indirect paths of discovery Many worked examples provide applications to areas such as astrophysics hyperfine structure and coherent anisotropic excitation The book presents a firm foundation for specialists in atomic physics as well as a capstone application for specialists in astrophysics chemistry condensed matter and other related fields *A Symposium on Atomic Structure and Valence* George Lindenber Clark,American Chemical Society.
