Advanced Mean Field Methods Theory And Practice:

   Advanced Mean Field Methods Manfred Opper,David Saad,2001 This book covers the theoretical foundations of advanced mean field methods explores the relation between the different approaches examines the quality of the approximation obtained and demonstrates their application to various areas of probabilistic modeling A major problem in modern probabilistic modeling is the huge computational complexity involved in typical calculations with multivariate probability distributions when the number of random variables is large Because exact computations are infeasible in such cases and Monte Carlo sampling techniques may reach their limits there is a need for methods that allow for efficient approximate computations One of the simplest approximations is based on the mean field method which has a long history in statistical physics The method is widely used particularly in the growing field of graphical models Researchers from disciplines such as statistical physics computer science and mathematical statistics are studying ways to improve this and related methods and are exploring novel application areas Leading approaches include the variational approach which goes beyond factorizable distributions to achieve systematic improvements the TAP Thouless Anderson Palmer approach which incorporates correlations by including effective reaction terms in the mean field theory and the more general methods of graphical models Bringing together ideas and techniques from these diverse disciplines this book covers the theoretical foundations of advanced mean field methods explores the relation between the different approaches examines the quality of the approximation obtained and demonstrates their application to various areas of probabilistic modeling   **Proceedings of the Third SIAM International Conference on Data Mining** Daniel Barbara,Chandrika Kamath,2003-01-01 The third SIAM International Conference on Data Mining provided an open forum for the presentation discussion and development of innovative algorithms software and theories for data mining applications and data intensive computation This volume includes 21 research papers   **Statistical Physics of Spin Glasses and Information Processing** Hidetoshi Nishimori,2001 Spin glasses are magnetic materials Statistical mechanics a subfield of physics has been a powerful tool to theoretically analyse various unique properties of spin glasses A number of new analytical techniques have been developed to establish a theory of spin glasses Surprisingly these techniques have turned out to offer new tools and viewpoints for the understanding of information processing problems including neural networks error correcting codes image restoration and optimization problems This book is one of the first publications of the past ten years that provide a broad overview of this interdisciplinary field Most of the book is written in a self contained manner assuming only a general knowledge of statistical mechanics and basic probability theory It provides the reader with a sound introduction to the field and to the analytical techniques necessary to follow its most recent developments   **Advanced Structured Prediction** Sebastian Nowozin,Peter V. Gehler,Jeremy Jancsary,Christoph H. Lampert,2014-12-05 An overview of recent work in the field of structured prediction the building of predictive machine learning models for interrelated and dependent outputs The goal of

structured prediction is to build machine learning models that predict relational information that itself has structure such as being composed of multiple interrelated parts These models which reflect prior knowledge task specific relations and constraints are used in fields including computer vision speech recognition natural language processing and computational biology They can carry out such tasks as predicting a natural language sentence or segmenting an image into meaningful components These models are expressive and powerful but exact computation is often intractable A broad research effort in recent years has aimed at designing structured prediction models and approximate inference and learning procedures that are computationally efficient This volume offers an overview of this recent research in order to make the work accessible to a broader research community The chapters by leading researchers in the field cover a range of topics including research trends the linear programming relaxation approach innovations in probabilistic modeling recent theoretical progress and resource aware learning Contributors Jonas Behr Yutian Chen Fernando De La Torre Justin Domke Peter V Gehler Andrew E Gelfand S bastien Gigu re Amir Globerson Fred A Hamprecht Minh Hoai Tommi Jaakkola Jeremy Jancsary Joseph Keshet Marius Kloft Vladimir Kolmogorov Christoph H Lampert Fran ois Laviolette Xinghua Lou Mario Marchand Andr F T Martins Ofer Meshi Sebastian Nowozin George Papandreou Daniel Pr a Gunnar R tsch Am lie Rolland Bogdan Savchynskyy Stefan Schmidt Thomas Schoenemann Gabriele Schweikert Ben Taskar Sinisa Todorovic Max Welling David Weiss Thom Werner Alan Yuille Stanislav ivn **Advances in Neural Information Processing Systems 16** Sebastian Thrun,Lawrence K.
