

Multilevel bus architectures

- Don't want one bus for all communication
 - Peripherals would need high-speed, processor-specific bus interface
 - excess gates, power consumption, and cost; less portable
 - Too many peripherals slows down bus

- **Processor-local bus** 
 - High speed, wide, most frequent communication
 - Connected to cache, memory controllers, etc.

Advanced Multimicroprocessor Bus Architectures:

Advanced Multimicroprocessor Bus Architectures Janusz Zalewski,1995 *Advanced Multimicroprocessor Bus Architectures* Janusz Zalewski,1995 On-Chip Communication Architectures Sudeep Pasricha,Nikil Dutt,2010-07-28 Over the past decade system on chip SoC designs have evolved to address the ever increasing complexity of applications fueled by the era of digital convergence Improvements in process technology have effectively shrunk board level components so they can be integrated on a single chip New on chip communication architectures have been designed to support all inter component communication in a SoC design These communication architecture fabrics have a critical impact on the power consumption performance cost and design cycle time of modern SoC designs As application complexity strains the communication backbone of SoC designs academic and industrial R D efforts and dollars are increasingly focused on communication architecture design On Chip Communication Architectures is a comprehensive reference on concepts research and trends in on chip communication architecture design It will provide readers with a comprehensive survey not available elsewhere of all current standards for on chip communication architectures A definitive guide to on chip communication architectures explaining key concepts surveying research efforts and predicting future trends Detailed analysis of all popular standards for on chip communication architectures Comprehensive survey of all research on communication architectures covering a wide range of topics relevant to this area spanning the past several years and up to date with the most current research efforts Future trends that will have a significant impact on research and design of communication architectures over the next several years **Architecture of Computing Systems - ARCS 2007** Paul Lukowicz,2007-03-05 This book constitutes the refereed proceedings of the 20th International Conference on Architecture of Computing Systems ARCS 2007 held in Zurich Switzerland in March 2007 Coverage details a broad range of research topics related to basic technology architecture and application of computing systems with a strong focus on system aspects of pervasive computing and self organization techniques in both organic and autonomic computing **Advanced Computer Architectures** Sajjan G. Shiva,2005-09-20 Despite the tremendous advances in performance enabled by modern architectures there are always new applications and demands arising that require ever increasing capabilities Keeping up with these demands requires a deep seated understanding of contemporary architectures in concert with a fundamental understanding of basic principles that allows one to anticipate what will be possible over the system s lifetime Advanced Computer Architectures focuses on the design of high performance supercomputers with balanced coverage of the hardware software structures and application characteristics This book is a timeless distillation of underlying principles punctuated by real world implementations in popular current and past commercially available systems It briefly reviews the basics of uniprocessor architecture before outlining the most popular processing paradigms performance evaluation and cost factor considerations This builds to a discussion of pipeline design and vector processors data parallel architectures and multiprocessor systems Rounding out the

book the final chapter explores some important current and emerging trends such as Dataflow Grid biology inspired and optical computing More than 220 figures tables and equations illustrate the concepts presented Based on the author s more than thirty years of teaching and research Advanced Computer Architectures endows you with the tools necessary to reach the limits of existing technology and ultimately to break them

Integrated System-Level Modeling of

Network-on-Chip enabled Multi-Processor Platforms Tim Kogel,Rainer Leupers,Heinrich Meyr,2006-08-25 We are presently observing a paradigm change in designing complex SoC as it occurs roughly every twelve years due to the exponentially increasing number of transistors on a chip This design discontinuity as all previous ones is characterized by a move to a higher level of abstraction This is required to cope with the rapidly increasing design costs While the present paradigm change shares the move to a higher level of abstraction with all previous ones there exists also a key difference For the rst time shrinking geometries do not leadtoacorrespondingincreaseofperformance InarecenttalkLisaSuofIBM pointed out that in 65nm technology only about 25% of performance increase can be attributed to scaling geometries while the lion share is due to innovative processor architecture 1 We believe that this fact will revolutionize the entire semiconductor industry What is the reason for the end of the traditional view of Moore s law It is instructive to look at the major drivers of the semiconductor industry wireless communications and multimedia Both areas are characterized by a rapidly increasingdemandofcomputationalpowerinordertoprosessthesophisticated

algorithmsnecessarytooptimallyutilizethepreciousresourcebandwidth The computational power cannot be provided by traditional processor architectures and shared bus type of interconnects The simple reason for this fact is energy ef ciency there exist orders of magnitude between the energy ef ciency of an algorithm implemented as a xed functionality computational element and of a software implementation on a processor

Rapid developments in microelectronics and computer science continue to provide opportunities for real time control engineers to address new challenges New opportunities arise from such diverse directions as ever increasing system complexity and sophistication environmental legislation economic competition safety and reliability These are typical themes which were highlighted at the IFAC AARTC 97 Workshop The AARTC 97 Final Programme consisted of 22 sessions covering major areas of software hardware and applications for real time control Important topics were soft computing methods software tools and architectures embedded systems parallel and distributed systems architectures custom processors algorithms estimation methods neural networks fuzzy methods PID controllers transport applications industrial process control robotics and discrete event and hybrid systems

Embedded Software Design and Programming of Multiprocessor System-on-Chip Katalin Popovici, Frédéric Rousseau, Ahmed A. Jerraya, Marilyn Wolf, 2010-03-03 Current multimedia and telecom applications require complex heterogeneous multiprocessor system on chip MPSoC architectures with specific communication infrastructure in order to achieve the required performance Heterogeneous MPSoC includes different types of processing units DSP microcontroller ASIP and different communication schemes fast links non standard memory organization and access Programming an MPSoC requires the generation of efficient software running on MPSoC from a high level environment by using the characteristics of the architecture This task is known to be tedious and error prone because it requires a combination of high level programming environments with low level software design This book gives an overview of concepts related to embedded software design for MPSoC It details a full software design approach allowing systematic high level mapping of software applications on heterogeneous MPSoC This approach is based on gradual refinement of hardware software interfaces and simulation models allowing to validate the software at different abstraction levels This book combines Simulink for high level programming and SystemC for the low level software development This approach is illustrated with multiple examples of application software and MPSoC architectures that can be used for deep
