*Advances in Distributed Systems* Sacha Krakowiak,Santosh Shrivastava,2003-06-26 In 1992 we initiated a research project on large scale distributed computing systems LSDCS It was a collaborative project involving research institutes and universities in Bologna Grenoble Lausanne Lisbon Rennes Rocquencourt Newcastle and Twente The World Wide Web had recently been developed at CERN but its use was not yet as common place as it is today and graphical browsers had yet to be developed It was clear to us and to just about everyone else that LSDCS comprising several thousands to millions of individual computer systems nodes would be coming into existence as a consequence both of technological advances and the demands placed by applications We were excited about the problems of building large distributed systems and felt that serious rethinking of many of the existing computational paradigms algorithms and structuring principles for distributed computing was called for In our research proposal we summarized the problem domain as follows We expect LSDCS to exhibit great diversity of node and communications capability Nodes will range from mobile laptop computers workstations to supercomputers Whereas mobile computers may well have unreliable low bandwidth communications to the rest of the system other parts of the system may well possess high bandwidth communications capability To appreciate the problems posed by the sheer scale of a system comprising thousands of nodes we observe that such systems will be rarely functioning in their entirety     **Interactive Distributed Multimedia Systems and Services** Berthold Butscher,Eckhard Moeller,Herwart Pusch,1996-02-26 This book constitutes the refereed proceedings of the first European Workshop on Interactive Distributed Multimedia Systems and Services IDMS 96 held in Berlin Germany in March 1996 The 21 revised papers included were carefully selected for presentation at the workshop they examine current and new approaches to interactive distributed multimedia systems and services from different points of view including research and development management and users Among the topics addressed are application development support multimedia services on demand multimedia conferencing multimedia networking continuous media streams multimedia experiments     Advanced Distributed Systems Victor Larios,Felix F.
