Advances In Geophysical Data Processing Twodimensional Transforms:

Two-dimensional Transforms Marwan Simaan, 1985 *Transforms and Applications Handbook* Alexander D.

Poularikas, 2018-09-03 Updating the original *Transforms and Applications Handbook* Third Edition solidifies its place as the complete resource on those mathematical transforms most frequently used by engineers scientists and mathematicians Highlighting the use of transforms and their properties this latest edition of the bestseller begins with a solid introduction to signals and systems including properties of the delta function and some classical orthogonal functions It then goes on to detail different transforms including lapped Mellin wavelet and Hartley varieties Written by top experts each chapter provides numerous examples and applications that clearly demonstrate the unique purpose and properties of each type The material is presented in a way that makes it easy for readers from different backgrounds to familiarize themselves with the wide range of transform applications Revisiting transforms previously covered this book adds information on other important ones including Finite Hankel Legendre Jacobi Gegenbauer Laguerre and Hermite Fraction Fourier Zak Continuous and discrete Chirp Fourier Multidimensional discrete unitary Hilbert Huang Most comparable books cover only a few of the transforms addressed here making this text by far the most useful for anyone involved in signal processing including

electrical and communication engineers mathematicians and any other scientist working in this field *The Transforms and Applications Handbook* Alexander D. Poularikas, 1996 This handbook brings together in a single volume the most important mathematical transforms used by engineers and scientists It begins with a treatment of the delta function and some of the classical orthogonal functions The book covers transforms such as Fourier Transforms Cosine and Sine Transforms Harley Transforms Laplace Transforms Z Transforms Hilbert Transforms Radon and Abel Transforms Time Frequency Transformations Wavelet Transforms Hankel Transforms and Mellin Transforms Applications and examples are included

IGARSS '87, 1987 **Books in Print**, 1994 *Developments in Geophysical Exploration Methods* A. A.

Fitch, 2012-12-06 One facet of development in this field is that the methods of gathering and processing geophysical data and displaying results lead to presentations which are more and more comprehensible geologically Expressed in another way the work of the interpreter becomes progressively less onerous The contributions in this collection of original papers illustrate this direction of development especially in seismic prospecting If one could carry out to perfection the steps of spiking deconvolution migration and time depth conversion then the seismic section would be as significant geologically as a cliff face and as easy to understand Perhaps this is not yet achieved but it remains an objective brought closer by work such as that described by the authors The editor offers his best thanks to the contributors busy geophysicists who have written with erudition on this range of subjects of current interest A A FITCH v CONTENTS Preface v List of Contributors IX 1

Second Edition C.H. Chen,2012-02-22 Continuing in the footsteps of the pioneering first edition *Signal and Image Processing for Remote Sensing Second Edition* explores the most up to date signal and image processing methods for dealing with remote sensing problems Although most data from satellites are in image form signal processing can contribute significantly in extracting information from remotely sensed waveforms or time series data This book combines both providing a unique balance between the role of signal processing and image processing Featuring contributions from worldwide experts this book continues to emphasize mathematical approaches Not limited to satellite data it also considers signals and images from hydroacoustic seismic microwave and other sensors Chapters cover important topics in signal and image processing and discuss techniques for dealing with remote sensing problems Each chapter offers an introduction to the topic before delving into research results making the book accessible to a broad audience This second edition reflects the considerable advances that have occurred in the field with 23 of 27 chapters being new or entirely rewritten Coverage includes new mathematical developments such as compressive sensing empirical mode decomposition and sparse representation as well as new component analysis methods such as non negative matrix and tensor factorization The book also presents new experimental results on SAR and hyperspectral image processing The emphasis is on mathematical techniques that will far outlast the rapidly changing sensor software and hardware technologies Written for industrial and academic researchers and graduate students alike this book helps readers connect the dots in image and signal processing New in This Edition The second edition includes four chapters from the first edition plus 23 new or entirely rewritten chapters and 190 new figures New topics covered include Compressive sensing The mixed pixel problem with hyperspectral images Hyperspectral image HSI target detection and classification based on sparse representation An ISAR technique for refocusing moving targets in SAR images Empirical mode decomposition for signal processing Feature extraction for classification of remote sensing signals and images Active learning methods in classification of remote sensing images Signal subspace identification of

hyperspectral data Wavelet based multi hyperspectral image restoration and fusion The second edition is not intended to replace the first edition entirely and readers are encouraged to read both editions of the book for a more complete picture of signal and image processing in remote sensing See *Signal and Image Processing for Remote Sensing* CRC Press 2006
