Advances In Quantum Chemistry Volume 9:

Reviews in Computational Chemistry, Volume 17 Kenny B. Lipkowitz, Donald B. Boyd, 2003-04-24 Computational chemistry is increasingly used in most areas of molecular science including organic inorganic medicinal biological physical and analytical chemistry Researchers in these fields who do molecular modelling need to understand and stay current with recent developments This volume like those prior to it features chapters by experts in various fields of computational chemistry Two chapters focus on molecular docking one of which relates to drug discovery and cheminformatics and the other to proteomics In addition this volume contains tutorials on spin orbit coupling and cellular automata modeling as well as an extensive bibliography of computational chemistry books

FROM REVIEWS OF THE SERIES Reviews in Computational Chemistry remains the most valuable reference to methods and techniques in computational chemistry

JOURNAL OF MOLECULAR GRAPHICS AND MODELLING One cannot generally do better than to try to find an appropriate article in the highly successful Reviews in Computational Chemistry The basic philosophy of the editors seems to be to help the authors produce chapters that are complete accurate clear and accessible to experimentalists in particular and other nonspecialists in general

JOURNAL OF THE AMERICAN CHEMICAL SOCIETY *Advances in Quantum Chemistry*, 2005-12-20 Advances in Quantum Chemistry presents surveys of current developments in this rapidly developing field that falls between the historically established areas of mathematics physics chemistry and biology With invited reviews written by leading international researchers each presenting new results it provides a single vehicle for following progress in this interdisciplinary area This volume continues the tradition with high quality and thorough reviews of various aspects of quantum chemistry It contains a variety of topics on the use of quantum mechanical methods to calculate molecular properties including response properties Linear and non linear response methods have been developed and implemented for most of the approximate wave functions used in quantum chemistry giving a range of computational methods of varying cost and accuracy Thus it is presently possible to calculate for example excitation energies linear and nonlinear optical properties one and multi photon transition rates and magnetically induced transition moments for a wide range of molecules and target accuracies These calculations aid in the interpretation of a wide range of spectroscopy including electron spin resonance nuclear magnetic resonance and magnetic circular dichroism and general laser spectroscopy
