*Dredging for Gold in California* D'Arcy Weatherbe,1907      **Geochemistry, Mineralogy and Genesis of Gold Deposits**  
I.Y. Nekrasov,2018-05-02 The behaviour of gold in sedimentary magmatic and postmagmatic processes are studied and 40  
gold bearing minerals including ten which were recently discovered are described The results are presented of new  
experimental studies on phase relations in gold sulphide systems The solubility form of gold migration in high temperature  
chloride sulphide and arsenic solutions are determined Based on the new data the genesis of gold deposits is studied and a  
geochemical classification proposed This book is designed for specialists in the field of gold chemistry geochemistry and  
mineralogy and for field geologists surveying and prospecting for gold      **The Metallurgy of the Common Metals, Gold,

s crust means overlapping and overprinting deposit styles are common Characterization of mineralization from an early stage  
becomes important particularly where the mineralization is complex in order to maximize exploration and project  
development success and mining productivity Various techniques are used at different stages of a project to characterize  
gold deposits This Special Publication offers a cross section of some specific techniques used to investigate a variety of gold  
deposit types The papers highlight both the breadth of the available techniques and their utility in deposit characterization  
but also the many significant remaining questions and problems related to the exploration and research of gold deposits  
Several papers include suggestions of avenues for fruitful further research including a paper discussing a new approach to  
classifying orogenic gold deposits and a paper describing archaeological applications of natural gold analyses      **Guide to
