**Predictive Cruise Control for Road Vehicles Using Road and Traffic Information** Péter Gáspár, Balázs Németh, 2018-11-19 This book focuses on the design of a multi criteria automated vehicle longitudinal control system as an enhancement of the adaptive cruise control system It analyses the effects of various parameters on the average traffic speed and the traction force of the vehicles in mixed traffic from a macroscopic point of view and also demonstrates why research and development in speed control and predictive cruise control is important The book also summarises the main steps of the system s robust control design from the modelling to its synthesis and discusses both the theoretical background and the practical computation method of the control invariant sets The book presents the analysis and verification of the system both in a simulation environment and under real world conditions By including the systematic design of the predictive cruise control using road and traffic information it shows how optimization criteria can lead to multiobjective solutions and the advanced optimization and control design methods required The book focuses on a particular method by which the unfavourable effect of the traffic flow consideration can be reduced It also includes simulation examples in which the speed design is performed while the analysis is carried out in simulation and visualization environments This book is a valuable reference for researchers and control engineers working on traffic control vehicle control and control theory It is also of interest to students and academics as it provides an overview of the strong interaction between the traffic flow and an individual vehicle cruising from both a microscopic and a macroscopic point of view

**T-S fuzzy-model-based adaptive cruise control for longitudinal car-following considering vehicle lateral stability** Changzhu Zhang, Xiaoyu Wei, Zhuping Wang, Hao Zhang, Xuyang Guo, 2023-11-07 Adaptive cruise control is one of the essential technologies of advanced driver assistance systems which is used to maintain a safe distance between an ego vehicle and a preceding vehicle and has been extensively applied in the automotive industry and control community Note that some vehicle manoeuvres may approach handling limits to prevent collisions under complex road conditions which often leads to vehicle lateral instability while cruising In this study a T S fuzzy model predictive control framework is applied to the problem of adaptive cruise control Variations in the preceding vehicle velocity and road surface

conditions are considered to formulate adaptive cruise control as a tracking control problem of a T S fuzzy system subject to parameter uncertainties and external persistent perturbations Then a robust positively invariant set is introduced to derive an admissible T S fuzzy controller by solving a min max optimization problem under a series of linear matrix inequality constraints Finally a CarSim MATLAB joint simulation is conducted to illustrate the effectiveness of the proposed method which ensures longitudinal adaptive cruise control for a car following scenario with lateral vehicle stability Cruise Control Jim Nelson,2003 **Adaptive Cruise Control** Ronald K. object adaptive cruise control ACC system is presented A sensor fusion configuration as well as object tracking and sensor fusion algorithms are presented to obtain a thorough representation of the traffic scene ahead of an ACC controlled vehicle The sensor fusion configuration includes a 77GHz radar sensor and an IR laser sensor for object detection A monocular CCD camera system is employed for lane recognition and the lane assignment of the detected objects Experimental results of all presented algorithms are given The control model and the control objectives of a multi object ACC system are presented The multi object ACC problem is looked at as a constrained optimal control problem incorporating the dynamics of the traffic scene the driver s desire to cruise at a certain velocity the lane assignment of the other road users the objective of respecting certain minimum distances to other road users and to adapt the velocity to the flow of the other road users Additionally overtaking a preceding vehicle on the right can be avoided The choice of the relevant object is implicitly determined by the cost function and the optimization criteria Constraints imposed by physical limitations as well as by comfort and safety considerations can be included and a receding horizon control strategy is applied The multi object ACC problem is looked at as a constrained finite time optimal control CFTOC problem with a mixed logical dynamical MLD system description With an efficient way to represent and evaluate the explicit solution to the corresponding multi parametric mixed integer quadratic program it is possible to include all desired control objectives in the problem formulation and still obtain an explicit solution suitable for real time operation Simulation results of this multi object ACC control approach are presented and the controller is compared to a reference ACC controller With the efficient controller representation the multi object ACC controller is implemented on the ECU of a standard production platform vehicle to confirm the simulation results in real traffic
