**Rheology and Processing of Liquid Crystal Polymers** Domenico Acierno, A.A. Collyer, 2013-11-27 Liquid crystal polymers LCPs have many strange properties that may be utilized to advantage in the processing of products made from them and their blends with isotropic polymers This volume volume 2 in the series Polymer Liquid Crystals deals with their strange flow behaviour and the models put forward to explain the phenomena that occur in such polymers and their blends It has been known for some time that small additions of a thermotropic LCP to isotropic polymers not only gives an improvement in the strength and stiffness of the blend but improves the processability of the blend over that of the isotropic polymer In the case of lyotropic LCPs it is possible to create a molecular composite in which the reinforcement of an isotropic polymer is achieved at a molecular level by the addition of the LCP in a common solvent If the phenomena can be fully understood both the reinforcement and an increase in the processability of isotropic polymers could be optimized This book is intended to illustrate the current theories associated with the flow of LCPs and their blends in the hope that such an optimization will be achieved by future research Chapter 1 introduces the subject of LCPs and describes the terminology used Chapter 2 then discusses the more complex phenomena associated with these materials In Chapter 3 the way in which these phenomena may be modelled using hamiltonians is fully covered
