Crystal Growth, 1971, 1972 **CRYSTAL GROWTH 1971- PROCEEDINGS OF THE 3RD INTERNATIONAL CONFERENCE ON CRYSTAL GROWTH.** , Crystal Growth 1971 R. A. Laudise, J. B. Mullin, Boyan Mutaftschiev, 1972
Crystal Growth, 1971. Proceedings. Edited by R.A. Laudise, J.B. Mullin [and] B. Mutaftschiev B. Mutaftschiev (ed), J. B. Mullin (ed), 1972 Crystal Growth R. A. Laudise, 1972 *Crystal Growth* C. H. L. Goodman, 2013-04-17 In the last decade or so the growth of single crystals has assumed enormous importance for both academic research and technology particularly in the field of electronics The range of fields involved is great from electro optics to metal corrosion from semiconductors to magnetic bubble materials one can add to the list almost indefinitely However while the general principles of crystal growth can be applied almost right across the board it turns out that the precise way in which one can grow a particular crystal best varies considerably from material to material This of course is to emphasise the obvious nonetheless except in specialised papers in the scientific literature little attempt seems to have been made to deal in any detail with the causes of the difficulties in growing particular kinds of materials and with methods of circumventing them These specialised papers may be inaccessible and in any case cannot be usually very broad in scope or detailed in treatment simply because of the pressure to keep papers short And unfortunately few specialised monographs seem to have been produced These points and others similar emerged repeatedly in discussions with crystal growers from all parts of the World and indicated that there was a need for a publication which would deal in detail with problems and techniques for specialised areas of crystal growth *Crystal Growth* Brian R. Pamplin, 2013-09-11 *Crystal Growth* Second Edition deals with crystal growth methods and the relationships between them The chemical physics of crystal growth is discussed along with solid growth techniques such as annealing sintering and hot pressing melt growth techniques such as normal freezing cooled seed method crystal pulling and zone melting solution growth methods and vapor phase growth This book is comprised of 15 chapters and opens with a bibliography of books and source material highlighted by a classification of crystal growth techniques The following chapters focus on the molecular state of a crystal when in equilibrium with respect to growth or dissolution the fundamentals of classical and modern hydrodynamics as applied to crystal growth processes creation control and measurement of the environment in which a crystal with desired properties can grow and growth processes where transport occurs through the vapor phase The reader is also introduced to crystal growth with molecular beam epitaxy crystal pulling as a crystal growth method and zone refining and its applications This monograph will be of interest to physicists and crystallographers
Crystal Growth R.A. Laudise, 1972 **Handbook of Crystal Growth** Peter Rudolph, 2014-11-04 Vol 2A Basic Technologies Handbook of Crystal Growth Second Edition Volume IIA Basic Technologies presents basic growth technologies and modern crystal cutting methods Particularly the methodical fundamentals and development of technology in the field of bulk crystallization on both industrial and research scales are explored After an introductory chapter on the formation of

Söhnel, John Garside, 1992 In this book the authors have drawn together theoretical and experimental material concerning precipitation to provide a uniform and coherent picture of the overall process The focus is mainly on aqueous solutions and covers features common to all precipitation processes rather than individual cases Considerable emphasis has been placed on developing a rigorous theoretical background to the kinetics of precipitation as well as attempting to demonstrate how this might be applied to industrial operations Extensive tables in the appendices define the solubility products of inorganic substances the surface energies of precipitated solids and solution concentration units *Canadiana*, 1968
