Radium-barium Separation Process M. L. Salutsky,J. G. Stites,1951 The separation of radium from barium radium mixtures by fractional precipitation from homogeneous solution of the chromates and carbonates was investigated A discussion of distribution coefficients indicates that fractionation systems in which logarithmic distribution is obtained are more efficient than those in which the radium is distributed homogeneously in the crystals For the chromates and carbonates a logarithmic distribution of radium in the crystals was proved by calculating distribution coefficients The effects on the

distribution coefficients of temperature of barium concentration and of radium concentration with respect to barium were determined Radium enrichment studies indicate that a procedure utilizing the fractional precipitation of barium radium chromate mixtures could compete on a commercial basis with the usual fractional crystallization of halides and would be more efficient than the fractional precipitation of the carbonates
