enhances the effects of the body's own insulin into a program of eight proven strategies. Foremost is diet, but the real surprise is that the diet that actually works, a modified rural Asian diet, derives 70% of its calories from carbohydrates. Dr. King disentangles the myths and confusion surrounding carbohydrates, fats, protein, and fiber, and shows why not all carbs are bad and why sugar is not the root of all evil. Losing weight is also key, but in a very doable way, significant changes happen with a 5 to 7% reduction of body weight. He emphasizes the importance of exercise; it increases the muscles' glucose absorbing ability and gives an easy-to-follow program of aerobic and strength exercises. And he shows why diabetics especially need those seven hours of sleep a night; chronic lack of sleep causes insulin resistance. A twelve-week plan shows how to put all of it into action to take charge of blood glucose levels and significantly improve your health.

The Epidemiology of Diabetes Mellitus Jean Marie Ekoé, Marian Rewers, Rhys Williams, Paul Zimmet, 2008-09-15. The first edition of this book gained recognition as the definitive textbook of diabetes epidemiology. The second edition builds on this success, gathering recent information on international trends and data for diabetes mellitus. In particular, the book highlights the dramatic rise of Type 2 diabetes in children, adolescents, and the elderly throughout the world. One new section features prevention and screening of both Type 1 and Type 2 diabetes. Other new chapters cover the epidemiology of obesity and the impact of nutrition, and review available guidelines for better worldwide glycemic control. Future challenges, including the effects of antipsychotic treatment and HIV infection and therapy on diabetes, are also addressed. All chapters have been completely revised and updated, covering definitions, classification, and risk factors for diabetes; new evidence for screening and prevention of Type 1 and Type 2 diabetes; epidemiology of complications and associated risk factors; economic aspects; the direct and indirect costs of diabetes. **The Epidemiology of Diabetes Mellitus** fills the need for a current compendium of diabetes epidemiology in the tradition of the first monumental text of the late Kelly West. It is essential reading for general practitioners, diabetologists, clinical endocrinologists, cardiologists, epidemiologists, nurses, dietitians, and other diabetes care providers, as well as health care decision makers.

The Diabetes Reset George King, Royce Flippin, 2015-01-13. Imagine controlling, avoiding, reversing the health hazard of the 21st century World Health Organization disease that afflicts nearly 26 million Americans and is an imminent threat to an additional 80 million adults and children. That's exactly the promise of **The Diabetes Reset** by Dr. George King, research director and chief science officer at Harvard's Joslin Diabetes Center, the world's largest and most respected diabetes research center, synonymous with revolutionizing the diagnosis, treatment, and prevention of diabetes. Based on the most cutting-edge research, including the groundbreaking discovery of brown fat in adults and its role in burning calories and enhancing the effects of the body's own insulin, **The Diabetes Reset** translates the latest findings into a plan that will let readers avoid control and even reverse type 2 diabetes. The program begins with losing weight and shows why losing only 5% of body weight makes a life-changing difference. It explains how a good night's sleep can significantly lower blood glucose levels and why sleep deprivation works in reverse. It disentangles the

carbohydrate confusion reveals how to decrease the body's inflammatory response and explains the importance of moderate exercise. There are eight strategies in all; if you implement only one, your type 2 diabetes will improve. Pursue all eight of them and you can stop type 2 diabetes in its tracks. You can even reverse it effectively, resetting your body's glucose metabolism for a long, healthy life.

Type 2 diabetes. A comparison of the awareness in the Asian Indian Culture and the USA

Henriette Frädriich, 2016-08-01 Seminar paper from the year 2015 in the subject Cultural Studies Miscellaneous grade 1.7 University of Potsdam Institut für Anglistik Amerikanistik course Seminar Researching Cultural Models language English abstract For some time now India has been undergoing a nutrition transition which boosts the development of overweight and obesity leading to chronic diseases such as type 2 diabetes. Due to industrialisation and modernization the diet of Indians living in urbanised areas changes from traditional diets to excessive intake of western fast food. Besides these dietary factors the rising lack of physical activity is highly associated with the rising emergence of the aforementioned disease. According to the Asian Diabetes Prevention Initiative in the year 2013 60% of diabetics lived in Asia whereby India was home to the second largest population of individuals with type 2 diabetes worldwide with 65.1 million diabetics. In contrast the American Diabetes Association reported 21.9 million diabetics for the year 2012. As a result the awareness of influencing factors for the development respectively prevention of type 2 diabetes should be quite high for both countries and even higher for the Asian Indian population. To see if this is the case in this paper I am going to examine the English language of both cultures with the help of corpus linguistic analysis. Some factors influencing the emergence of type 2 diabetes were already mentioned before. Overweight and obesity are clearly the main risk factors for developing type 2 diabetes. Asian Indians have a higher percentage of abdominal body fat compared to Europeans which leads to a higher insulin resistance associated with type 2 diabetes. Therefore Asian Indians have a higher prevalence for developing type 2 diabetes than other ethnic groups even at a lower Body Mass Index. Of course body weight is highly dependent on nutritional factors. In addition to the traditional consumption of already unhealthy white rice, refined grains and saturated fats from palm oil especially the increased consumption of western fast food raises the intake of fat, sugar and calories. *Diabetic Medicine*, 1998

These 3 diseases account for more than half the deaths in Americans over the age of 60. The proposition of rational guidelines for preventive action and therapeutic intervention of these diseases and current research addressing some of the controversies associated with the pathogenesis and management of the 3 diseases.

are discussed. Material is presented on lipids and coronary artery disease, sodium and hypertension and dietary management and prognosis for diabetes mellitus. *wz International Clinical Nutrition Review*, 1993 *Indian Journal of Medical Research*, 2007 **Applied Nutrition II** E. C. Bateman, 1984 Diabetes for Nurses Lynne Jerreat, 1999. This work addresses diabetes as both a bio-chemical disease and a psychosocial problem and provides research-based information with suggestions for problem solving and planning. Divided into three sections, the first part of the book introduces diabetes and examines the altered physiology, the diagnosis, the treatments available and complications. The second section addresses the practice of patient education and the clinical management of diabetes. The final section examines diabetes care in context and looks at broader issues such as the psychological and ethical aspects of diabetes. **Diabetic Pregnancy** Michael Brudenell, Marjorie Doddridge, 1989.
