Constructivism and Science Robert E. Butts, J.R. Brown, 2012-12-06 The idea to produce the current volume was conceived by Jiirgen Mittelstrass and Robert E Butts in 1978 Idealist philosophers are wrong about one thing the temporal gap separating idea and reality can be very long indeed even ten or so years Problems of timing were joined by personal problems and by the pressure of other professional commitments Fortunately James Brown agreed to cooperate in the editing of the volume the infusion of his usual energy good judgement and good natured promptness saved the volume and made its production possible Despite the delays the messages of the papers included in the book have not gone stale An

extremely worthwhile exercise in international philosophical cooperation has come to fruition the German constructivist philosophical position is here represented in papers in English that will make its contemporary importance available to a larger audience The editors owe thanks to many persons All involved in the project owe much to the interest and support of Nicholas Rescher a friend of the undertaking from the time of its inception My review of the translations was helped immensely by Andrea Purvis careful copy editing of the typescript Most of all however we owe gratitude and admiration for the tireless efforts on behalf of this enterprise to Jiirgen Mittelstrass

Breaking Images Brian Greer,David Kollosche,Ole Skovsmose,2024-12-11 Mathematics is an activity something we do not just something inert that we study This rich collection begins from that premise to explore the various social influences institutional forces and lived realities that shape and mould the study and practice of mathematics and are moulded by it in turn These twenty one essays explore questions of mathematics as a topic of philosophy but also the nature and purpose of mathematics education and the role of mathematics in moulding citizens It challenges the biases and prejudices inherent within uninformed histories of mathematics including problems of white supremacy the denial of cultural difference and the global homogenization of teaching methods In particular the book contrasts the effectiveness of mathematics and science in modelling physical phenomena and solving technical problems with its ineffectiveness in modelling social phenomena and solving human problems and urges us to consider how mathematics might better meet the urgent crises of our age The book addresses anybody who is interested in reflecting on the role of mathematics in society from different perspectives It allows mathematicians to ponder about the cultural connections of mathematics and provides new perspectives for philosophical sociological and cultural studies of mathematics Because of the book s emphasis on education in mathematics it is especially interesting for mathematics teachers and teacher educators to challenge their understanding of the subject
