Digital Microwave Receivers:

Microwave Receivers with Electronic Warfare Applications James B. Tsui, 1992-01-01 Digital Microwave Receivers James Tsui, 1989 Digital Microwave Receivers James B. Tsui, 1989-01-01 **Digital Techniques for Wideband Receivers** James B. Tsui, 2004-06-30 This book is a current comprehensive design guide for your digital processing work with today's complex receiver systems. This book brings you up to date with the latest information on wideband electronic warfare receivers, the ADC testing procedure, frequency channelization and decoding schemes, and the operation of monobit receivers. **Microwave Receivers with Electronic Warfare Applications** James Tsui, 1986-09-02 Provides a comprehensive introduction to microwave receivers, stressing both the general characteristics of microwave devices and the uses of particular systems. Covers receiver definition and performance and discusses the important area of receiver systems. Emphasizes the necessity of designing microwave receiver systems to receive hostile communications during electronic warfare. Material has been collected from technical articles, specialists in the field, and the author's own experience. Written at a level appropriate for advanced undergraduates and first-year graduate students. Special Design Topics in Digital Wideband Receivers James B. Y. Tsui, 2010 Offering engineers a thorough examination of special, more advanced aspects of digital wideband receiver design, this practical book builds on fundamental resources on the topic, helping you gain a more comprehensive understanding of the subject. This in-depth volume presents a detailed look at a complete receiver design, including the encoder. Moreover, it discusses the detection of exotic signals and provides authoritative guidance on designing receivers used in electronic warfare. From frequency modulation and biphasic shifting keys to parameter encoders in electronic warfare receivers and the use of the simulation and probability density function to predict the false alarm parameter, this book focuses on critical topics and techniques that help you design digital wideband receivers for top performance. The authoritative reference is supported with over 310 illustrations and more than 180 equations. **A Comparison of Advanced Adaptive Receivers for Digital Microwave Radio in a Multipath Fading Environment** Kenneth Steven Lazaris-Brunner, 1988 **Algorithms for Digital Micro-Wave Receivers & Optimal System Identification**, 1997 According to the original Project Proposal, the two primary directions considered in this research effort are: 1. Advanced signal processing algorithms for digital microwave receivers with Electronic Warfare applications. Significant contribution has been made on estimating the Angles of Arrival (AOA) or frequencies. Specifically, a computationally efficient and accurate Minimum Norm Method has been developed that does not require any Eigenanalysis. Theoretical Perturbation Analysis of this method has been completed. A Maximum Likelihood Estimator (MLE) that ensures unit circle frequencies has been developed. Furthermore, a new pipelined adaptive algorithm for tracking moving targets has been presented. 2. Optimal identification of rational transfer functions. Unlike existing algorithms which either modify or linearize the error criterion, the true criteria have been decoupled into 1. a purely linear problem for the numerator and 2. a

nonlinear problem with reduced dimensionality for the denominator the decoupled estimators possess global optimality properties both have reduced computational complexity than existing methods The results on 1 D cases have been extended for identifying Multi Dimensional systems In addition a new Distributed Look Ahead architecture and an Optimal Approximation Approach have been proposed for high speed implementation of Recursive Digital Filters

Algorithms for Digital Micro-wave Receivers and Optimal System Identification Arnab Kumar Shaw, 1994 The research in the Year 1 of this project has focused on two primary directions as originally proposed i Advanced signal processing algorithms for digital microwave receivers with Electronic Warfare applications For estimating the Angles Of Arrival or Radio Frequencies a significant contribution has been made with a computationally efficient Minimum Norm Method that does not require any Eigenanalysis but produces equally good estimates A Maximum Likelihood Estimator MLE that ensures unit circle frequencies has been proposed for obtaining the most accurate estimates Furthermore two new algorithms for improved AR ARMA spectrum estimator from noisy observations have been considered Several time domain and frequency domain algorithms for detecting the presence of targets are also being studied ii A general and unified theoretical framework for optimal identification of rational transfer function coefficients from 1 Input Output data 2 Impulse Response data and 3 Frequency Response data Unlike existing algorithms which either modify or linearize the error criterion to estimate the unknown parameters simultaneously the true error criteria have been decoupled into i a purely linear problem for estimating the optimal numerator and ii a nonlinear problem with reduced dimensionality for the optimal denominator The decoupled estimators possess global optimality properties but have reduced computational complexity than existing methods Angles of Arrival estimation Frequency estimation Digital receiver design Improved AR and ARMA modeling Electronic Warfare EW signal detection Optimal system identification from input output and frequency domain data
