Digital Beauties 2d And 3d Computer Generated Digital Models:

Digital Beauties Julius Wiedemann, 2002 Bogen indeholder et udvalg af digitalt skabte kvinder *Physical Culture, Power, and the Body* Patricia Vertinsky, Jennifer Hargreaves, 2006-11-28 During the past decade there has been an outpouring of books on the body in society but none has focused as specifically on physical culture that is cultural practices such as sport and dance within which the moving physical body is central Questions are raised about the character of the body specifically the relation between the natural body the constructed body and the alien or virtual body The themes of the book are wide in scope including physical culture and the fascist body sport and the racialised body sport medicine health and the culture of risk the female Muslim sporting body power and politics experiencing the disabled sporting body embodied exhibitions of striptease and sport the social logic of sparring sport girls and the neoliberal body *Physical Culture Power and the Body* aims to break down disciplinary boundaries in its theoretical approaches and its readership The author's multi disciplinary backgrounds demonstrate the widespread topicality of physical culture and the body *Re-doing Rapunzel's Hair* Lisa Pavlik-Malone, 2014-04-23 This volume presents an exploration of the role of embodied cognition in creating personal imaginative renditions of hair that also distally relate to the symbolic significance of the fairytale character Rapunzel's hair in terms of physical life romantic life spiritual life and psychic life respectively Integral to this relation is the author's idea of fancifold which is a quality or state of the imagination that can produce unique neuropsychological elements of enchantment and disenchantment entwined This book will be of interest to scholars and other researchers concerned with how cognition including psychology and the brain psychology and literature psychology and art philosophy of mind and metaphor might relate specifically to understanding the subjective experience of hair **Visions of the Apocalypse** Wheeler Winston Dixon, 2003-09-17 *Visions of the Apocalypse* examines the cinema's fascination with the prospect of nuclear and or natural annihilation as seen in such films as *Saving Private Ryan* *Bowling for Columbine* *We Were Soldiers* *Invasion U S A* *The Last War* *Tidal Wave* *The Bed Sitting Room* *The Last Days of Man on Earth* and numerous others It also considers the ways in which contemporary cinema has become increasingly hyper conglomerised leading to films with ever higher budgets and fewer creative risks Along the way the author discusses such topics as the death of film itself to be replaced by digital video the political and social tensions that have made these visions of infinite destruction so appealing to the public and the new wave of Hollywood war films coupled with escapist comedies in the post 9 11 era Encompassing both questions of physical and filmic mortality *Visions of the Apocalypse* is a meditation on the questions of time memory and the cinema's seemingly unending appetite for spectacles of destruction *Ethics and the Artificial Image* Veronica Neri, 2026-02-16 The book focuses on the emerging ethical issues related to the dissemination of images produced by artificial intelligence With the introduction of generative AI it has become necessary to rethink the status of the image and the concept of imagination from an ethical perspective The author discusses in particular the role of visual generative AI in advertising communication

and in the domain of visual information focusing on the polarizing power and biasing effects of certain images Many ethical issues intersect with European regulations concerning technoartificial images for example in relation to copyright co authorship bias privacy liability etc In conclusion a reflection is offered on the fundamental role of ethics in the design of AI and on the ways in which generative AI models are used and brought into relation The vulnerability of systems and individuals to the risk of an increasingly simulacral reality and to the anesthetization of our gaze is analyzed Will technological progress then remain at the service of humanity fostering ethical awareness or will it lead us toward uncertainty and radical nihilism

Integrating 3D and 2D Computer Generated Imagery for the Comics Medium Ruben DeLuna, 2005 Advances in 3D computer technology have led to aesthetic experimentation within the comics medium Comic creators have produced comic books done entirely with 3D models that are then assembled digitally for the printed page However in using these 3D objects in a comic format the creators have developed art styles that do not adhere to the paradigms established by this traditionally 2D medium More successful results can be achieved by integrating 3D computer generated imagery with traditional 2D imagery rather than replacing it This thesis develops a method of combining rendered 3D models with 2D vector graphics to create a comic book art style that is consistent with the traditional medium while still taking advantage of the new technology
