Medicine, Food and Nutrition Board, Committee on Accelerating Progress in Obesity Prevention, 2012-05-30 One third of adults are now obese and children's obesity rates have climbed from 5 to 17 percent in the past 30 years. The causes of the nation's obesity epidemic are multifactorial, having much more to do with the absence of sidewalks and the limited availability of healthy and affordable foods than a lack of personal responsibility. The broad societal changes that are needed to prevent obesity will inevitably affect activity and eating environments and settings for all ages. Many aspects of the obesity problem have been identified and discussed; however, there has not been complete agreement on what needs to be done to accelerate progress. *Accelerating Progress in Obesity Prevention* reviews previous studies and their recommendations and presents five key recommendations to accelerate meaningful change on a societal level during the next decade. The report suggests recommendations and strategies that independently can accelerate progress but urges a systems approach of many strategies working in concert to maximize progress in accelerating obesity prevention. The recommendations in *Accelerating Progress in Obesity Prevention* include major reforms in access to and opportunities for physical activity; widespread reductions in the availability of unhealthy foods and beverages; and increases in access to healthier options at affordable, competitive prices; an overhaul of the messages that surround Americans through marketing and education with respect to physical activity and food consumption; expansion of the obesity prevention support structure provided by health care providers, insurers, and employers; and schools as a major national focal point for obesity prevention. The report calls on all individuals, organizations, agencies, and sectors that do or can influence physical activity and nutrition environments to assess and begin to act on their potential roles as leaders in obesity prevention. *Weight in America* Barbara Wexler, 2014-10 Provides information from academic and governmental sources on every aspect of overweight, obesity, and eating disorders, including their prevalence in the United States, their consequences, public opinion about them, and methods of combating them. **The Obesity Epidemic** Robyn Toomath, 2017-02-28 Drawing on the latest research and twenty years of working with overweight patients, this short and punchy book dispels myths and tells the tough truths about our obesity epidemic. Toomath shows how our modern world is making us fat. And while governments and individuals keep trying things that science shows do not work, she outlines what just might make a difference in ending the obesity epidemic. **Diet in health and disease** Julius Friedenwald, 1906 *Diet Nation* Patrick Basham, Gio B. Gori, John C. Luik, 2006 Does the obesity epidemic require radical countermeasures? Contrary to the obesity crusaders' belief, this work argues that we cannot overcome the obesity problem through legislation. Obesity Emily Mahoney, 2017-07-15 Due to economic factors, larger portion sizes in restaurants, and sedentary lifestyles caused by an increase in our use of technology, obesity rates have risen steadily in the last decade. This, in turn, has created a multimillion-dollar diet industry that often preys on people's desire to lose weight quickly and easily. Through full-color photographs and engaging sidebars, readers will learn about the complex causes of obesity as well as ways to live a healthier lifestyle. What can be done to reverse this trend? Discussion questions such as this
