Different Faces Of Geometry:

Different Faces of Geometry Simon Donaldson, Yakov Eliashberg, Misha Gromov, 2006-04-11 Different Faces of Geometry edited by the world renowned geometers S Donaldson Ya Eliashberg and M Gromov presents the current state new results original ideas and open questions from the following important topics in modern geometry These apparently diverse topics have a common feature in that they are all areas of exciting current activity The Editors have attracted an impressive array of leading specialists to author chapters for this volume G Mikhalkin USA Canada Russia V D Milman Israel and A A Giannopoulos Greece C LeBrun USA Ko Honda USA P Ozsvath USA and Z Szabo USA C Simpson France D Joyce UK and P Seidel USA and S Bauer Germany One can distinguish various themes running through the different contributions There is some emphasis on invariants defined by elliptic equations and their applications in low dimensional topology symplectic and contact geometry Bauer Seidel Ozsvath and Szabo These ideas enter more tangentially in the articles of Joyce Honda and LeBrun Here and elsewhere as well as explaining the rapid advances that have been made the articles convey a wonderful sense of the vast areas lying beyond our current understanding Simpson s article emphasizes the need for interesting new constructions in that case of Kahler and algebraic manifolds a point which is also made by Bauer in the context of 4 manifolds and the 11 8 conjecture LeBrun s article gives another perspective on 4 manifold theory via Riemannian geometry and the challenging open questions involving the geometry of even well known 4 manifolds There are also striking contrasts between the articles The authors have taken different approaches for example the thoughtful essay of Simpson the new research results of LeBrun and the thorough expositions with homework problems of Honda One can also ponder the differences in the style of mathematics In the articles of Honda Giannopoulos and Milman and Mikhalkin the geometry is present in a very vivid and tangible way combining respectively with topology analysis and algebra The papers of Bauer and Seidel on the other hand makes the point that algebraic and algebro topological abstraction triangulated categories spectra can play an important role in very unexpected ways in concrete geometric problems From the Preface by the Editors

Face Geometry and Appearance Modeling Zicheng Liu, Zhengyou Zhang, 2011-04-18 Human faces are familiar to our visual systems We easily recognize a person s face in arbitrary lighting conditions and in a variety of poses detect small appearance changes and notice subtle expression details Can computer vision systems process face images as well as human vision systems can Face image processing has potential applications in surveillance image and video search social networking and other domains A comprehensive guide to this fascinating topic this book provides a systematic description of modeling face geometry and appearance from images including information on mathematical tools physical concepts image processing and computer vision techniques and concrete prototype systems The book will be an excellent reference for researchers and graduate students in computer vision computer graphics and multimedia as well as application developers who would like to gain a better understanding of the state of the art

Facial Cognition Michael J. Wenger, James T. Townsend, 2005-04-11 Within the last three decades interest in the psychological experience of human faces has drawn together cognitive science researchers from diverse backgrounds Computer scientists talk to neural scientists who draw on the work of mathematicians who explicitly influence those conducting behavioral experiments The chapters in this volume illustrate the breadth of the research on facial perception and memory with the emphasis being on mathematical and computational approaches In pulling together these chapters the editors sought to do much more than illustrate breadth They endeavored as well to illustrate the synergies and tensions that inevitably result from adopting a broad view one consistent with the emerging discipline of cognitive science
