This book is a strenuous critique of the misinterpretation of statistical knowledge of populations in mainstream psychology exploring the implications of assuming that those statistics constitute scientific knowledge of individuals It investigates the essential nature and historical roots of this interpretive practice and documents the lack of change in mainstream thinking despite previous critiques of the practice The author contends that prevailing interpretive traditions result in bad science in that invalid claims are made to knowledge of individuals He also discusses the socio ethical problems resulting from this

misinterpretation of statistics where psychological practitioners unjustifiably endorse interventions in the lives of individuals Lamiell urges psychologists to abandon the aggregate statistical methods which he argues have transformed the field into psycho demography and to embrace instead alternative research methods that are logically suited to gaining scientific knowledge about the psychological functioning of individuals This book concludes by highlighting some of the currently available methodological alternatives as well as discussing some enduring conceptual impediments to the serious consideration of those alternatives
