Diffraction By An Immersed Elastic Wedge:

Diffraction by an Immersed Elastic Wedge Jean-Pierre Croisille, Gilles Lebeau, 2006-11-15 This monograph presents the mathematical description and numerical computation of the high frequency diffracted wave by an immersed elastic wave with normal incidence The mathematical analysis is based on the explicit description of the principal symbol of the pseudo differential operator connected with the coupled linear problem elasticity fluid by the wedge interface This description is subsequently used to derive an accurate numerical computation of diffraction diagrams for different incoming waves in the fluid and for different wedge angles The method can be applied to any problem of coupled waves by a wedge interface This work is of interest for any researcher concerned with high frequency wave scattering especially mathematicians acousticians engineers

Diffraction by an Immersed Elastic Wedge Jean-Pierre Croisille, Gilles LeBeau, 2014-01-15 *A Unified Approach to Boundary Value Problems* Athanassios S. Fokas, 2008-11-06 A novel approach to analysing initial boundary value problems for integrable partial differential equations PDEs in two dimensions based on ideas of the inverse scattering transform that the author introduced in 1997 This method is unique in also yielding novel integral representations for linear PDEs Several new developments are addressed in the book including a new transform method for linear evolution equations on the half line and on the finite interval analytical inversion of certain integrals such as the attenuated Radon transform and the Dirichlet to Neumann map for a moving boundary integral representations for linear boundary value problems analytical and numerical methods for elliptic PDEs in a convex polygon and integrable nonlinear PDEs An epilogue provides a list of problems on which the author s new approach has been used offers open problems and gives a glimpse into how the method might be applied to problems in three dimensions

The Wave Diffracted by a Wedge with Mixed Boundary Conditions Olivier Lafitte, 2002 This monograph studies the diffraction of a wave by a curved wedge on the plane in the case where each side of the wedge is characterized by a mixed boundary condition of impedance type This book is suitable for graduate students and researchers interested in partial differential equations in particular in diffraction theory and its applications to problems in physics

Mathematical Modelling of Wave Phenomena Börje Nilsson, Louis Fishman, 2006-05-12 This conference series intends to illuminate the relationship between different types of waves This second conference focused primarily on classical wave modeling of acoustic waves in solids and fluids electromagnetic waves as well as elastic wave modeling and both direct and inverse problems are addressed Topics included are 1 Classical linear wave propagation modeling analysis and computation general electromagnetic applications acoustics of fluids acoustics of solids 2 classical nonlinear wave propagation modeling analysis and computation 3 inverse scattering modeling gneral and electromagnetic imaging wood imaging seismic imaging 4 quantum and statistical mechanics 5 signal processing and analysis

processes i.e processes in continuous time with stationary and independent increments are named after Paul Levy who made the connection with infinitely divisible distributions and described their structure They form a flexible class of models which have been applied to the study of storage processes insurance risk queues turbulence laser cooling and of course finance where the feature that they include examples having heavy tails is particularly important Their sample path behaviour poses a variety of difficult and fascinating problems Such problems and also some related distributional problems are addressed in detail in these notes that reflect the content of the course given by R Doney in St Flour in 2005

Construction of Global Lyapunov Functions Using Radial Basis Functions Peter Giesl,2007-04-04 The basin of attraction of an equilibrium of an ordinary differential equation can be determined using a Lyapunov function A new method to construct such a Lyapunov function using radial basis functions is presented in this volume intended for researchers and advanced students from both dynamical systems and radial basis functions Besides an introduction to both areas and a detailed description of the method it contains error estimates and many examples
