Rosato, Denis L. Blackmore, 2013-04-17 Segregation is a pervasive phenomenon whereby a flowing granular mass consisting of particles with diverse physical properties becomes spatially inhomogeneous In the industrial sector that deals with the handling and processing of bulk solids this non uniformity is highly undesirable since blend homogeneity is generally a stringent requirement of most products In the arena of geophysical flows segregation can enhance the destructive capabilities of natural events such as avalanches and landslides During the last 15 years these issues have provided motivation and fostered collaborations between the communities of mathematicians engineers industrial researchers and physicists to develop predictive models of segregation by integrating the perspectives and approaches of each The collection of unique papers brings to light many of the perplexing scientific and technical issues in our current understanding of this complex phenomenon It addresses advances in experiment computational modeling and theory This volume is one of the very few books devoted entirely to problems of segregation of particulate solids **Diffusion in Materials** Marek Danielewski, International Conference on Diffusion in Materials (6, 2004, Kraków), 2005 **Diffusion Processes in High Technology Materials**, 1988 **Diffusion in Amorphous Materials** Minerals, Metals and Materials Society Staff, Diffusion processes in high technology materials D.
