

# How to hold a camera

It's worth taking a few minutes to practise holding your camera before you start shooting – you'll get sharper shots

## FINGER

The camera body is designed to be gripped with your right hand and your index finger over the shutter release. You should be able to support the button with a finger to maintain your grip.

## HAND

Back your wrist in your left hand. This should allow you to hold the front of the camera against your face with the hand, adding your right hand to grip the components.

## ELBOWS

Turn your elbows into your body to brace your camera steady. The further out your elbows are, the more unstable you will be.

## EYEBROW CONTACT

Let the camera rest your ear and rest the shoulder against your shoulder. This helps another point of contact on the body for more stability.

## PORTRAIT

If you're used to holding your camera in portrait orientation, then turn it over on the other side of the lens. It can be a little awkward, but your arms will become accustomed.

## LEGS

Place your feet with your feet in your shoulder width. Keeping your feet a shoulder distance apart will provide a more stable body stance.

## TAKE A MAT

When kneeling to take some pictures, you might get out on a mat. Take a mat or a piece of fabric to kneel on for comfort while maintaining your stance.

## BACK PANEL CONTROL

With your hands in the correct position, your thumb is well placed to access the controls on the back of the camera after the shooting settings.

## BRING ONE LEG UP

By sitting down with a kneeling position and bringing one leg up, you can rest your body into a more stable position. Place your elbow on your knee to connect your leg and arm together, creating a second point of contact to make you more steady.

## BEST ELBOWS

If you have your elbow against your body, then your elbow will be a lot steadier. Look for steady points to rest your elbow on.

## CONTROL YOUR BREATHING

Remember when you take a shot? If you hold your breath or breathe, you'll find you miss the mark. It's important to breathe and exhale during your shooting process.

## LEAN IN

Leaning against a wall or other object is a good way to stabilize your camera. This can be useful when shooting in a tight space without a tripod.
