## **Digital Images And Human Vision:**

**Digital Images and Human Vision** Andrew B. Watson, 1993 These fifteen contributions by distinguished vision and imaging scientists explore the role of human vision in the design of modern image communication systems A dominant theme in the book is image compression how compression algorithms can be designed to make best use of what we know about human vision Electronic image communications which encompass television high definition television teleconferencing multimedia digital photography desktop publishing and digital movies is a rapidly growing segment of technology and business Because these products and technologies are designed for human viewing knowledge of human perception is essential to optimal design This book provides a timely compendium of important ideas and perspectives on such subjects as the key aspects of human visual sensitivity that are relevant to image communications and conversely the major problems in image communications that vision science can address the mathematical models of human vision that are useful in the design of image communications systems reliable and efficient methods of evaluating visual quality and aspects of human vision that can be exploited to provide substantial improvements in coding efficiency Andrew B Watson is Senior Scientist for Vision Research at NASA Contributors Albert J Ahumada Jr E Barth V Michael Bove Jr Gershon Buchsbaum Phillippe Cassereau Pamela C Cosman Scott J Daly Michael Eckert Bernd Girod William E Glenn Robert M Gray Paul J Hearty Bradley Horowitz Stanley Klein Jeffrey Lubin Cynthia Null Karen L Oehler Alex Pentland Todd Reed Andrew B Watson B Wegmann Christof Zetsche Models of Human Vision in Digital Image Bandwidth Compression Douglas James Granrath, 1979 Image Transmission and Coding Based on Human Vision Raphael Jona Rom, 1975 In recent years more and more attention was paid to digital image processing especially as a result of the development of highly efficient algorithms and also because of technologically better facilities Concurrently attempts were made to find a mathematical model for human vision to achieve better understanding about that mechanism Some of the image processing problems that were and are tackled are image enhancement bandwidth reduction image transmission etc Unfortunately very few have taken the mechanism of the human vision into consideration in their processes This work is an attempt to incorporate the model of human vision in image transmission and coding An optimal system is developed to transmit a digital image over a noisy channel The same system is used for image bandwidth reduction utilizing a simple coding scheme which is not based on the knowledge of the statistics of the image in question The improvement of the optimal system over other similar systems are demonstrated and provide explanation for situations where other systems failed The model used for transmitting images can be also interpreted as the model of the visual mechanism itself and thus shed some light on human vision from a new interesting aspect **Handbook of Human-Computer Interaction** M.G. Helander, T.K. Landauer, P.V. Prabhu, 1997-08-18 This completely revised edition of the Handbook of Human Computer Interaction of which 80% of the content is new reflects the developments in the field since the publication of the first edition in 1988 The handbook is concerned with principles for design of the Human

Computer Interface and has both academic and practical purposes It is intended to summarize the research and provide recommendations for how the information can be used by designers of computer systems The volume may also be used as a reference for teaching and research Professionals who are involved in design of HCI will find this volume indispensable including computer scientists cognitive scientists experimental psychologists human factors professionals interface designers systems engineers managers and executives working with systems development Much of the information in the handbook may also be generalized to apply to areas outside the traditional field of HCI
