Contrast-Enhanced Digital Mammography (CEDM) Jacopo Nori, Maninderpal Kaur, 2018-09-25. This book offers a comprehensive practical resource entirely devoted to Contrast Enhanced Digital Mammography (CEDM), a state of the art technique that has emerged as a valuable addition to conventional imaging modalities in the detection of primary and recurrent breast cancer and as an important preoperative staging tool for women with breast cancer. CEDM is a relatively new breast imaging technique based on dual energy acquisition combining mammography with iodine based contrast agents to display contrast uptake in breast lesions. It improves the sensitivity and specificity of breast cancer detection by providing higher foci to breast gland contrast and better lesion delineation than digital mammography. Preliminary results suggest that CEDM is comparable to breast MRI for evaluating the extent and size of lesions and detecting multifocal lesions and thus has the potential to become a readily available, fast and cost effective examination. With a focus on the basic imaging principles of CEDM, this book takes a practical approach to breast imaging. Drawing on the editors and authors' practical experience, it guides the reader through the basics of CEDM, making it especially accessible for beginners. By presenting the key aspects of CEDM in a straightforward manner and supported by clear images, the book represents a valuable guide for all practicing radiologists, in particular those who perform breast imaging and have recently incorporated or plan to incorporate CEDM into their diagnostic arsenal. **Digital Mammography** Elizabeth Krupinski, 2008-07-27. This volume 5116 of Springer's Lecture Notes in Computer Science contains the proceedings of the 9th International Workshop on Digital Mammography (IWDM) which was held July 20-23, 2008 in Tucson, AZ, in the USA. The IWDM meetings traditionally bring together a diverse set of researchers, physicists, mathematicians, computer scientists, engineers, clinicians, radiologists, surgeons, and representatives of industry who are jointly committed to developing technologies to support clinicians in the early detection and subsequent patient management of breast cancer. The IWDM conference series was initiated at a 1993 meeting of the SPIE Medical Imaging Symposium in San Jose, CA, with subsequent meetings hosted every two years at sites around the world. Previous meetings were held in York, England; Chicago, IL, USA; Nijmegen, Netherlands; Toronto, Canada; Bremen, Germany; Durham, NC, USA; and Manchester, UK. The 9th IWDM meeting was attended by a very international group of participants and during the

two and one half days of scientific sessions there were 70 oral presentations 34 posters and 3 keynote addresses The three keynote speakers discussed some of the hot topics in breast imaging today Karen Lindfors spoke on Dedicated Breast CT Initial Clinical Experiences Elizabeth Rafferty asked the question is Breast Tomosynthesis Ready for Prime Time Finally Martin Tornai discussed 3D Multi Modality Molecular Breast Imaging *Mammography and Breast Imaging: Just The Facts* Olive Peart,2005-04-30 The perfect review tool for radiologic technologists certifying or recertifying Following the guidelines specified by the American Registry of Radiologic Technologist AART Exam the book includes all breast imaging modalities and techniques as well as questions for self assessment **Textbook of Mammography** Audrey K. Tucker, Yin Yuen Ng,2001 X ray mammography is the most valuable imaging technique used in the detection and evaluation of breast disease This book is intended to provide radiologists in training and in practice with a practical guide to the acquisition identification and interpretation of mammograms as well as adjunctive modalities such as ultrasound FNA cytology MRI and digital imaging Many high quality images provide the reader with a comprehensive guide to the radiologic indications of benign and malignant breast disease The book also provides an overview of the crucial prerequisites for a successful breast cancer detection program by integrating the imaging modalities with technical and quality control issues epidemiologic data and risk benefit analysis
