Rott, 2012-12-06 Phenomena as diverse as tuberculin sensitivity delayed sensitivity to soluble proteins other than tuberculin contact allergy homograft rejection experimental autoallergies and the response to many microorganisms have been classified as members of the class of immune reactions known as delayed or cellular hypersensitivity Similarities in time course histology and absence of detectable circulating immunoglobulins characterize these cell mediated immune reactions in vivo The state of delayed or cellular hypersensitivity can be transferred from one animal to another by means of sensitized living lymphoid cells CHASE 1945 LANDSTEINER and CHASE 1942 MITCHISON 1954 The responsible cell has been described by GOWANS 1965 as a small lymphocyte Passive transfer has also been achieved in the human with extracts of sensitized cells LAWRENCE 1959 The in vivo characteristic of delayed hypersensitivity from which the class derives its name is the delayed skin reaction When an antigen is injected intradermally into a previously immunized animal the typical delayed reaction begins to appear after 4 hours reaches a peak at 24 hours and fades after 48 hours It is grossly characterized by induration erythema and occasionally necrosis The histology of the delayed reaction has been studied by numerous investigators COHEN et al 1967 GELL and HINDE 1951 KOSUNEN 1966 KOSUNEN et al 1963 MCCLUSKEY et al 1963 WAKSMAN 1960 WAKSMAN 1962 Initially dilatation of the capillaries with exudation of fluid and cells occurs National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1989

Koldovsky, H. Koprowski, O. Maaløe, R. Rott, H.-G. Schweiger, M. Sela, L. Syrušek, P. K. Vogt, E. Wecker, 2013-03-08 When we give a definition it is for the purpose of using it HENRI POINCARÉ in Science and Method A Objectives The first version of this paper was written to introduce new students and fellows of my laboratory to the mysteries of herpesviruses Consonant with this design sections dealing with well documented data were trimmed to the bone whereas many obscure phenomena controversial data and seemingly trivial observations were discussed generously and at length There is some doubt as to whether it was meant to be published but it was not a review The objective of reviews is frequently to bring order But alas even the most fluent summation of credible data frequently makes dull reading and too much plausible order like very little entropy in chemical reactions is not the most suitable environment on which to nurture the urge to discover This version is more charitable but not less imbalanced The bibliography reflects the intent of the paper and was updated last in December of 1968 It should be obvious without saying that no single account such as this can do justice or injustice as the case may be to the several hundred papers published on

herpesviruses each year or to the many thousand papers published on herpesviruses since the first of the members of the family was experimentally transmitted to a heterologous host more than half a century ago GRUTER 1924 B Definition 1

W. Henle, P. H. Hofschneider, H. Koprowski, O. Maaløe, F. Melchers, R. Rott, H. G. Schweiger, P. K. Vogt, 2012-12-06 Several discoveries are noteworthy for allowing us to probe the recesses of the virus infected cell and to search for cryptic viral genomes which might provide clues in our studies of cancer etiology or developmental biology One of the most notable was the discovery of reverse transcriptase This marked a momentous occasion in the history of molecular biology Not only did it provide insight into the mechanism of persistence of retroviruses but it also provided us with an enzyme that could synthesize a DNA copy of any RNA This DNA copy could then be used as a hybridization reagent to search for both complementary DNA and viral specific RNA Thus one could follow the course of any viral infection or probe in tumor cells for hidden viral genomes Second a great deal of credit must be given to the geneticists who isolated the various deletion mutants in the avian retrovirus system and thus provided us with the first means of isolating gene specific probes Finally the laboratories which have mapped the genome have provided us with the framework in which to ask very specific questions with our gene specific probes Recently numerous excellent reviews concerning various aspects of the retroviruses have appeared In this review I shall not even attempt to present a comprehensive review of retroviruses
