Murphy, Robert H. Michell, 2016-06-08 For the 6th Edition of this highly regarded textbook devoted to lipids the title has been modified from Lipid Biochemistry to Lipids to acknowledge the coming together of biological and medical sciences the increasingly blurred boundaries between them and the growing importance of lipids in diverse aspects of science and technology The principal aims of this new edition to inform students and researchers about lipids to assist teachers and encourage further research have not changed since previous editions Significant advances in lipid science have demanded yet another extensive rewriting for this edition with the addition of two new authors to cover new knowledge of genes coding for proteins involved in lipid metabolism the many lipids involved in cell signalling the roles of lipids in health and disease and new developments in biotechnology in support of agriculture and industry An introductory chapter summarizes the types of lipids covered and their identification and provides a guide to the contents Chapters contain boxes illustrating special topics key point summaries and suggested further reading Lipids Sixth Edition provides a huge wealth of information for upper level students of biological and clinical sciences food science and nutrition and for professionals working in academic and industrial research Libraries in all universities and research establishments where biological medical and food and nutritional sciences are studied and taught should have copies of this excellent and comprehensive new edition on their shelves **Lipid Metabolism in Mammals** Fred

Snyder, 1977-07 During the past decade we have witnessed a vast expansion in our knowledge of lipid metabolism especially for mammalian tissues One obvious conclusion arising from these studies is that no single overall scheme of lipid metabolism can be classed as distinctly characteristic of all mammalian organs Although certain synthetic and degradative lipid pathways are similar in a variety of organs I have been impressed by the notable exceptions I was motivated to organize this

work on Lipid Metabolism in Mammals because of the lack of a single reference source containing a comparative organ approach to lipid metabolism in mammals that emphasizes the uniqueness of pathways in the various organs of the body. Because of the escalation in lipid research I also feel strongly that there is an urgent need for an updated concise account of this field. The group of authors for the chapters in the two volumes of Lipid Metabolism in Mammals were selected for their expertise and personal experience with the lipid metabolism of the organs or blood constituents that are the subjects of the chapters. Sufficient leeway has been given each author to approach the subject matter from a personal viewpoint. However, the overall direction of each chapter has been slanted to emphasize the similarities and differences in lipid metabolism among organ systems. The introductory chapter on general pathways provides a convenient reference to illustrations of specific reaction sequences that are well established and that occur in a number of organs.
