## **Curvature And Characteristic Classes Lecture Notes In Mathematics Volume 640:**

**The Arithmetic and Geometry of Algebraic Cycles** B. Brent Gordon, 2000 The NATO ASI CRM Summer School at Banff offered a unique full and in depth account of the topic ranging from introductory courses by leading experts to discussions of the latest developments by all participants The papers have been organized into three categories cohomological methods Chow groups and motives and arithmetic methods As a subfield of algebraic geometry the theory of algebraic cycles has gone through various interactions with algebraic K theory Hodge theory arithmetic algebraic geometry number theory and topology These interactions have led to developments such as a description of Chow groups in terms of algebraic K theory the application of the Merkurjev Suslin theorem to the arithmetic Abel Jacobi mapping progress on the celebrated conjectures of Hodge and of Tate which compute cycles classgroups respectively in terms of Hodge theory or as the invariants of a Galois group action on tale cohomology the conjectures of Bloch and Beilinson which explain the zero or pole of the L function of a variety and interpret the leading non zero coefficient of its Taylor expansion at a criticalpoint in terms of arithmetic and geometric invariant of the variety and its cycle class groups The immense recent progress in the theory of algebraic cycles is based on its many interactions with several other areas of mathematics This conference was the first to focus on both arithmetic and geometric aspects of algebraic cycles It brought together leading experts to speak from their various points of view A unique opportunity was created to explore and view the depth and the breadth of the subject This volume presents the intriguing results

**The Gelfand Mathematical Seminars, 1990-1992** L. Corwin, I.M. Gelfand, J. Lepowsky, 2012-12-06 This Seminar began in Moscow in November 1943 and has continued without interruption up to the present We are happy that with this volume Birkhiiuser has begun to publish papers of talks from the Seminar It was unfortunately difficult to organize their publication before 1990 Since 1990 most of the talks have taken place at Rutgers University in New Brunswick New Jersey Parallel seminars were also held in Moscow and during July 1992 at IRES in Bures sur Yvette France Speakers were invited to submit papers in their own style and to elaborate on what they discussed in the Seminar We hope that readers will find the diversity of styles appealing and recognize that to some extent this reflects the diversity of styles in a mathematical society The principal aim was to have interesting talks even if the topic was not especially popular at the time The papers listed in the Table of Contents reflect some of the rich variety of ideas presented in the Seminar Not all the speakers submit ted papers Among the interesting talks that influenced the seminar in an important way let us mention for example that of R Langlands on per colation theory and those of J Conway and J McKay on sporadic groups In addition there were many extemporaneous talks as well as short discus sions

*Algebraic \$K\$-Theory* Wayne Raskind, Charles A. Weibel, 1999 This volume presents the proceedings of the Joint Summer Research Conference on Algebraic K theory held at the University of Washington in Seattle High quality surveys are written

by leading experts in the field Included is an up to date account of Voevodsky s proof of the Milnor conjecture relating the Milnor K theory of fields to Galois cohomology The book is intended for graduate students and research mathematicians interested in K theory algebraic geometry and number theory

**The Regulators of Beilinson and Borel** José Ignacio Burgos Gil,2002 This book contains a complete proof of the fact that Borel s regulator map is twice Beilinson s regulator map The strategy of the proof follows the argument sketched in Beilinson s original paper and relies on very similar descriptions of the Chern Weil morphisms and the van Est isomorphism The book has two different parts The first one reviews the material from algebraic topology and Lie group theory needed for the comparison theorem Topics such as simplicial objects Hopf algebras characteristic classes the Weil algebra Bott s Periodicity theorem Lie algebra cohomology continuous group cohomology and the van Est Theorem are discussed The second part contains the comparison theorem and the specific material needed in its proof such as explicit descriptions of the Chern Weil morphism and the van Est isomorphisms a discussion about small cosimplicial algebras and a comparison of different definitions of Borel s regulator

**Regulators** José Ignacio Burgos Gil,2012 This volume contains the proceedings of the Regulators III Conference held from July 12 to July 22 2010 in Barcelona Spain Regulators can be thought of as realizations from motivic cohomology which is very difficult to compute to more computable theories such as Hodge Betti l adic and Deligne cohomology It is a very intricate subject that thrives on its interaction with algebraic K theory arithmetic geometry number theory motivic cohomology Hodge theory and mathematical physics The articles in this volume are a reflection of the various approaches to this subject such as results on motivic cohomology descriptions of regulators a revisiting of a number of fundamental conjectures such as new results pertaining to the Hodge and standard conjectures and more
