Lives in Science Joseph C. Hermanowicz,2010-04-15 What can we learn when we follow people over the years and across the course of their professional lives Joseph C Hermanowicz asks this question specifically about scientists and answers it here by tracking fifty five physicists through different stages of their careers at a variety of universities across the country He explores these scientists shifting perceptions of their jobs to uncover the meanings they invest in their work when and where they find satisfaction how they succeed and fail and how the rhythms of their work change as they age His candid interviews with his subjects meanwhile shed light on the ways career goals are and are not met on the frustrations of the academic profession and on how one deals with the boredom and stagnation that can set in once one is established An in depth study of American higher education professionals eloquently told through their own words Hermanowicz s keen analysis of how institutions shape careers will appeal to anyone interested in life in academia
