Recent Advances in Big Data and Deep Learning Luca Oneto,Nicolò Navarin,Alessandro Sperduti,Davide Anguita,2019-04-02 This book presents the original articles that have been accepted in the 2019 INNS Big Data and Deep Learning INNS BDDL international conference a major event for researchers in the field of artificial neural networks big data and related topics organized by the International Neural Network Society and hosted by the University of Genoa In 2019 INNS BDDL has been held in Sestri Levante Italy from April 16 to April 18 More than 80 researchers from 20 countries participated in the INNS BDDL in April 2019 In addition to regular sessions INNS BDDL welcomed around 40 oral communications 6 tutorials have been presented together with 4 invited plenary speakers This book covers a broad range of topics in big data and deep learning from theoretical aspects to state of the art applications This book is directed to both Ph D students and Researchers in the field in order to provide a general picture of the state of the art on the topics addressed by the conference **Proceedings of International Conference on Recent Innovations in Computing** Yashwant Singh,Pradeep Kumar Singh,Maheshkumar H. Kolekar,Arpan Kumar Kar,Paulo J. Sequeira Gonçalves,2023-05-02 This book features selected papers presented at the 5th International Conference on Recent Innovations in Computing ICRIC 2022 held on May 13 14 2022 at the Central University of Jammu India and organized by the university s Department of Computer Science and Information Technology The conference was hosted in association with ELTE Hungary Knowledge University Erbil Cyber Security Research Lab and many other national international partners The book is divided into two volumes and it includes the latest research in the areas of software engineering cloud computing computer networks and Internet technologies artificial intelligence information security database and distributed computing and digital India **The 1997 IEEE International Conference on Neural Networks, June 9-12, 1997, Westin Galleria Hotel, Houston, Texas, USA.** ,1997 Current Perspective to Predict Actual Evapotranspiration Daniel Bucur,2017-05-24 Evapotranspiration is the largest outgoing water flux from the Earth s surface its accurate quantification is critical for the crop development in conditions of the climate changes from recent decades and it can contribute to a greater understanding of a range of agricultural ecosystem processes To evaluate the hydric requirements of the crops it was agreed that they should be reported to a maximum global evapotranspiration called potential evapotranspiration To estimate this variable a variety of methods were developed each with its benefits as well as trade offs Their use however is laborious due to their complexity and of the large number of parameters required In this book specialists concerns worldwide to develop simple but reliable

methodologies with less data requirement which will give accurate and appropriate results are presented In addition a study of the physics of the moisture evaporation process from porous media to elucidate what are the mechanisms of moisture migration from granular biopesticides is presented in the last chapter   IEEE … International Conference on Neural Networks Shun'ichi Amari,1997   Fatigue in multiple sclerosis – a current perspective Anna Pokryszko-Dragan,Giancarlo Comi,Iris-Katharina Penner,2023-04-18   **Autism: The Movement Perspective** Elizabeth B Torres,Anne M Donnellan,2015-05-19 Autism Spectrum Disorders ASD is portrayed as cognitive and social disorders Undoubtedly impairments in communication and restricted repetitive behaviors that now define the disorders have a profound impact on social interactions But can we go beyond the descriptive observational nature of this definition and objectively measure that amalgamate of motions and sensations that we call behavior In this Research Topic we bring movement and its sensation to the forefront of autism research diagnosis and treatment We gather researchers across disciplines with the unifying goal of recognizing movement and sensory disturbances as core symptoms of the disorder We also hear confirmation from the perspective of autism self advocates and parents Those important sources of evidence along with the research presented in this topic demonstrate without a doubt that profound movement and sensory differences do exist in ASD and that they are quantifiable The work presented in this Research Topic shows us that quantifiable differences in movements have a better chance than current observational techniques to help us uncover subtle solutions that the nervous system with autism has already spontaneously self discovered and utilized in daily living Where the naked eye would miss the unique subtleties that help each individual cope instrumentation and fine kinematic analyses of motions help us uncover inherent capacities and predispositions of the person with autism The work presented in this topic helps us better articulate through the voices of parents and self advocates those sensory motor differences that current inventories could not possibly uncover These differences are seldom perceived as they take place at timescales and frequencies that fall largely beneath our conscious awareness To the person in the spectrum living with this disorder and to the caregiver creating accommodations to help the affected loved one these subtleties are very familiar though Indeed they are often used in clever ways to facilitate daily routines We have waited much too long in science to listen to the very people that we are trying to define understand and help Being autism a social problem by definition it is remarkable that not a single diagnosis inventory measures the dyadic social interaction that takes place between the examiner and the examinees Indeed we have conceived the autistic person within a social context where we are incapable by definition of accepting those differences The burden is rather placed on the affected person to whom much too often we refer to in the third person as non verbal without intentionality without empathy or emotions without a theory of mind among other purely psychological guesses It is then too easy and shockingly allowed to reshape that person to mold that person to better conform to our social expectations and to extinguish behaviors that are socially unacceptable even through the use of aversive punishing reinforcement techniques if need be And yet none

of those techniques have had a single shred of objective scientific evidence of their effectiveness We have not objectively measured once nor have we physiologically characterized once any of those perceived features that we so often use to observationally define what we may think the autistic phenotype may be We have not properly quantified beyond paper and pencil methods the effectiveness of interventions in autism Let us not forget when we do our science that we are all part of the broad human spectrum   **Proceedings of the Winter, 1990, International Joint Conference on Neural Networks** Maureen Caudill,2022-03-10 This two volume set provides the complete proceedings of the 1990 International Joint Conference on Neural Networks held in Washington D C Complete with subject author and title indices it provides an invaluable reference to the current state of the art in neural networks Included in this volume are the latest research results applications and products from over 2 000 researchers and application developers from around the world Ideal as a reference for researchers and practitioners of neuroscience the two volumes are divided into eight sections Neural and Cognitive Sciences Pattern Recognition and Analysis of Network Dynamics Learning Theory Plenary Lecture by Bernard Widrow Special Lectures on Self Organizing Neural Architectures Application Systems and Network Implementations Robotics Speech Signal Processing and Vision Expert Systems and Other Real World Applications   *The Handbook of Brain Theory and Neural Networks* Michael A.
