15th Symposium On Reliable Distributed Systems:

Reliable Distributed Systems, 15th Symposium On IEEE Computer Society, IEEE Computer Society Press, IEEE, 1996-01-01 Contains papers from the October 1996 symposium emphasizing innovative approaches to dependable distributed system design and analysis and addressing problems and solutions in areas such as group communication time constraints replication recovery and architecture Offers sections on novel architectures evaluation and testing checkpointing and stable storage diagnosis group communication replication issues and time constraints plus an industry perspective on reliable distributed systems No index Annotation copyrighted by Book News Inc Portland OR

IEEE ... Symposium on Reliable Distributed Systems, 1997 Proceedings, 1996 *Building Dependable Distributed Systems* Wenbing Zhao, 2014-03-06 A one volume guide to the most essential techniques for designing and building dependable distributed systems Instead of covering a broad range of research works for each dependability strategy this useful reference focuses on only a selected few usually the most seminal works the most practical approaches or the first publication of each approach explaining each in depth usually with a comprehensive set of examples Each technique is dissected thoroughly enough so that readers who are not familiar with dependable distributed computing can actually grasp the technique after studying the book Building Dependable Distributed Systems consists of eight chapters The first introduces the basic concepts and terminology of dependable distributed computing and also provides an overview of the primary means of achieving dependability Checkpointing and logging mechanisms which are the most commonly used means of achieving limited degree of fault tolerance are described in the second chapter Works on recovery oriented computing focusing on the practical techniques that reduce the fault detection and recovery times for Internet based applications are covered in chapter three Chapter four outlines the replication techniques for data and service fault tolerance This chapter also pays particular attention to optimistic replication and the CAP theorem Chapter five explains a few seminal works on group communication systems Chapter six introduces the distributed consensus problem and covers a number of Paxos family algorithms in depth The Byzantine generals problem and its latest solutions including the seminal Practical Byzantine Fault Tolerance PBFT algorithm and a number of its derivatives are introduced in chapter seven The final chapter details the latest research results surrounding application aware Byzantine fault tolerance which represents an important step forward in the practical use of Byzantine fault tolerance techniques

Software Design for Resilient Computer Systems Igor Schagaev, Jürg Gutknecht, 2024-07-15 This book addresses the question of how system software should be designed to account for faults and which fault tolerance features should provide for highest reliability With this third edition of Software Design for Resilient Computer Systems the book is thoroughly updated to contain the newest advice regarding software resilience With a new introductory chapter the new edition is ideal for researchers and industry professionals In the book the authors first show how system software interacts with the hardware to tolerate faults They analyze and further develop the theory of fault tolerance to understand the diverse ways to increase the reliability of a system with special attention on the role of system software in this process They introduce the theory of redundancy and its use for construction of a subsystem through generalised algorithm of fault tolerance GAFT and apply it to distributed systems The book's approach is applied to various hardware subsystems different structures of RAM and processor cores and demonstrates exceptional performance reliability and energy efficiency This third edition devotes substantial attention to system software for modern computers including run time systems supporting algorithms of recovery
