

**Statistics on Industrial Injuries under Workmen's Accident Compensation Insurance.** The Ministry of Labour compiles statistics on the occurrence, etc., of industrial injuries (including accidents while commuting) to which the insurance was applied, based on workmen's accident compensation insurance statistics. The data are tabulated for the fiscal year and published in the "Annual Report of Statistics on Industrial Injuries under Workmen's Accident Compensation Insurance". Data for the calendar year are separately tabulated and presented in the "Yearbook of Industrial Injury" published by the Japan Industrial Safety Association. Information here refers to persons who suffered injuries during the survey period and were paid insurance benefits for four days or more of absence from work.

**Survey on Industrial Injuries (Approved Statistical Report).** With an aim to make clear the situation of the occurrence of industrial injuries, this survey has been conducted annually by the Ministry of Labour since 1958.

The survey is a sampling survey covering private, government and public establishments (including those consisting of managerial and clerical workers only) engaged in forestry, mining, construction, manufacturing, transport and communication, gas, water and steam, and laundry services, automobile maintenance, automobile repair, machine repair, building maintenance, building services and storage cleaning among the service category. The survey consists of the survey A covering about 1,000 sample establishments with 500 or more regular workers and the survey B covering about 1,000 sample establishments with 50-99 regular workers.

Industrial injuries here refer to death, loss of a part of body or partial bodily disability caused by accidents while working on duty, or suspension of business for one day or more (except the day of the accident) for medical treatment.

**Monthly Statistics for Mine Safety (Approved Statistical Report).** This report is a statistical survey initiated in 1949 when the Mine Safety Law was enacted and covers all mines under the Law. Information for the killed or injured in this table refers to persons killed or injured on duty (except those taken off). Among the authors, the seriously injured refers to persons severely wounded or persons absent from work for two weeks or more, and the slightly injured, to persons absent from work for three days or less than two weeks.

**Frequency rate of industrial injuries.** The rate refers to the frequency of industrial injuries expressed in terms of the number of the persons killed and injured per million man-hours worked. More concretely, it means the ratio of the number of persons killed and injured (multiplied by one million) to industrial injuries occurred during the survey period to the total man-hours worked by all workers.

**Severity rate of industrial injuries.** The rate refers to the weight of industrial injuries expressed in terms of the number of working days lost per thousand man-hours worked. More concretely, it means the ratio of the number of working days lost (multiplied by one thousand) to industrial injuries during the survey period to the total man-hours worked by all workers. As for the working days lost, those for the killed and for the permanent total disability are regarded as 7,000 days, and those for the permanent partial disability are calculated according to the degree of the disability.

**Information against environmental pollution.** Data refer to the number of grievances received by the windows for environmental pollution of the local public bodies, and have been compiled annually into the "Survey on Grievances against Environmental Pollution" by the Central Environmental Dispute Examination Commission of the Prime Minister's Office (the former Environmental Dispute Examination Commission) since fiscal 1953 which had succeeded the "Survey on Complaints and Petitions Concerning Environmental Pollution" when by the Ministry of Home Affairs since fiscal 1950.

**Road traffic accidents.** Data are tabulated by the National Police Agency based on the original reports on traffic accident statistics submitted by the police stations. Road traffic accidents refer to accidents involving death or injuries received by the traffic of vehicles (including light vehicles such as bicycles, etc.), automobiles and trains, on the roads governed by the Road Traffic Law, and do not include accidents with property damages only. Accordingly they include accidents at the railway crossing, but exclude other railway accidents. Persons killed refers to those who died within 24 hours after the road traffic accident occurred. Persons injured refers to those injured by road traffic accidents, the seriously injured referring to those who need medical treatment for 21 days or more, and the slightly injured, to those who need medical treatment for less than 21 days.

**Railway accidents.** As for the national railways, data are based on the survey made by the Japanese National Railways pursuant to the Regulations on Operations of the Japanese National Railways, etc., and as for private railways, data are based on the survey by the Ministry of Transport which

compiles the reports submitted in accordance with the Regulations Concerning the Notification of Operation Accidents of Private Railways and the Regulations Concerning the Notification of Operation Accidents of Street Railways, etc. Operation accidents refer to train collisions, train derailments, train fire, crossing accidents, road accidents, personal accidents, and other cases in which property damage of 500,000 yen or more occurred due to the operation of trains or rolling stock. Train observations refer to cases in which passenger trains are 10 minutes or more and freight 30 minutes or more behind the schedule. Persons killed refers to those who died within 24 hours after the accident occurred.

**Statistics on Shipping Accidents (Statistical Statistics).** These statistics were initiated as administrative statistics based on the reports on marine accidents submitted by ship's captain under the Marine Law enacted in 1936, and designated as Designated Statistics in 1956. However, in 1971, the designation was abolished, and since 1972, the data have been compiled as Statistical Statistics (abstract) from the raw records of the Marine Disaster Inquiry Agency. The shipping accidents cover those occurred within Japanese territorial waters (including foreign vessels) and those of Japanese vessels occurred in the open sea and in the territorial waters of foreign countries. Accidents by helms, tugboats, pleasure, fishing boats, ferries, moving boats and public use are not included.
