Material handling and logistics have become especially important to industrialists because of the competitive advantage that results from using the right methods to provide the right amount of the right material at the right place at the right time in the right condition in the right sequence in the right orientation and at the right cost But what are the right methods The emergence of sophisticated control systems coupled with advances in hardware design has resulted in a wide variety of technological alternatives available for practically any application Yet with the emergence of just in time methods and the apparent success of the firms that have relied on the use of people and simple rules rather than technology the proper role of hardware and software in material handling and logistics is open to debate Despite all that has been accomplished to date the design of material handling and logistics systems remains an art as well as a science Regardless of whether it is people conveyors lift trucks robots guided vehicles laser scanners storage retrieval machines carousels voice encoding machine vision automatic palletizers or other methods that are appropriate selecting the right methods for moving storing and controlling material is vital It is important that the selection decision be made after consideration is given to the requirements for amount material place time condition sequence orientation and cost      Human-in-the-Loop Simulations Ling Rothrock,S. **Patient Flow: Reducing Delay in Healthcare Delivery** Randolph Hall,2006-10-11 Patient Flow Reducing Delay in Healthcare Delivery is dedicated to improving healthcare through reducing the delays experienced by patients One aspect of this goal is to improve the flow of patients so that they do not experience unnecessary waits as they flow through a healthcare system Another aspect is ensuring that services are closely synchronized with patterns of patient demand Still another aspect is ensuring that ancillary services such as housekeeping and transportation are fully coordinate with direct patient care It is the first book treatment to have reduction in patient delay as its sole focus and therefore provides the foundation by which hospitals can implement change Reflecting the highly interdisciplinary and practitioner nature of this book the chapters have been written by doctors nurses industrial engineers system engineers and geographers and thus these perspectives provide the comprehensive view needed to address the problem of patient delay

Patient Flow Randolph Hall,2013-12-11 This book is dedicated to improving healthcare through reducing delays experienced by patients With an interdisciplinary approach this new edition divided into five sections begins

by examining healthcare as an integrated system Chapter 1 provides a hierarchical model of healthcare rising from departments to centers regions and the macro system A new chapter demonstrates how to use simulation to assess the interaction of system components to achieve performance goals and Chapter 3 provides hands on methods for developing process models to identify and remove bottlenecks and for developing facility plans Section 2 addresses crowding and the consequences of delay Two new chapters 4 and 5 focus on delays in emergency departments and Chapter 6 then examines medical outcomes that result from waits for surgeries Section 3 concentrates on management of demand Chapter 7 presents breakthrough strategies that use real time monitoring systems for continuous improvement Chapter 8 looks at the patient appointment system particularly through the approach of advanced access Chapter 9 concentrates on managing waiting lists for surgeries and Chapter 10 examines triage outside of emergency departments with a focus on allied health programs Section 4 offers analytical tools and models to support analysis of patient flows Chapter 11 offers techniques for scheduling staff to match patterns in patient demand Chapter 12 surveys the literature on simulation modeling which is widely used for both healthcare design and process improvement Chapter 13 is new and demonstrates the use of process mapping to represent a complex regional trauma system Chapter 14 provides methods for forecasting demand for healthcare on a region wide basis Chapter 15 presents queueing theory as a method for modeling waits in healthcare and Chapter 16 focuses on rapid delivery of medication in the event of a catastrophic event Section 5 focuses on achieving change Chapter 17 provides a diagnostic for assessing the state of a hospital and using the state assessment to select improvement strategies Chapter 18 demonstrates the importance of optimizing care as patients transition from one care setting to the next Chapter 19 is new and shows how to implement programs that improve patient satisfaction while also improving flow Chapter 20 illustrates how to evaluate the overall portfolio of patient diagnostic groups to guide system changes and Chapter 21 provides project management tools to guide the execution of patient flow projects
