handedness has been shown to be a possible marker for various psychological and physical abnormalities This book presents  
evidence by a number of researchers who evaluate whether there are indeed differences between left and right handers  
which extend into the broader psychological and physiological realms Several chapters show that left handedness is found in  
unexpectedly high proportions in populations that suffer from various immune deficiency diseases in alcoholics dyslexics  
mental retardates psychopaths and other clinical groups The book indicates why left handedness should be a marker for such  
conditions The genetic and environmental pressures on handedness are explored A model for pathological left handedness is  
presented along with some interesting data which suggests that left handedness may be associated with reduced life span
