Smoothness Priors Analysis of Time Series Genshiro Kitagawa, Will Gersch, 1996-08-09 Smoothness Priors Analysis of Time Series addresses some of the problems of modeling stationary and nonstationary time series primarily from a Bayesian stochastic regression smoothness priors state space point of view Prior distributions on model coefficients are parametrized by hyperparameters

Maximizing the likelihood of a small number of hyperparameters permits the robust modeling of a time series with relatively complex structure and a very large number of implicitly inferred parameters. The critical statistical ideas in smoothness priors are the likelihood of the Bayesian model and the use of likelihood as a measure of the goodness of fit of the model. The emphasis is on a general state space approach in which the recursive conditional distributions for prediction filtering and smoothing are realized using a variety of nonstandard methods including numerical integration, a Gaussian mixture distribution, two filter smoothing formula, and a Monte Carlo particle path tracing method in which the distributions are approximated by many realizations. The methods are applicable for modeling time series with complex structures.

Branching Processes C.C. Heyde, 1995-04-27 This volume presents the edited proceedings of the First World Congress on Branching Processes. The contributions present new research and surveys of the current research activity in this field. As a result, all those undertaking research in the subject will find this a timely and high quality volume to have on their shelves.

Stochastic Models Donald Andrew Dawson, Luis G. Gorostiza, B. Gail Ivanoff, 2000 This book presents the refereed proceedings of the International Conference on Stochastic Models held in Ottawa, ON, Canada, in honor of Professor Donald A. Dawson. Contributions to the volume were written by students and colleagues of Professor Dawson, many of whom are eminent researchers in their own right. A main theme of the book is the development and study of the Dawson-Watanabe superprocess, a fundamental building block in modelling interaction particle systems undergoing reproduction and movement. The volume also contains an excellent review article by Professor Dawson and a complete list of his work. This comprehensive work offers a wide assortment of articles on Markov processes, branching processes, mathematical finance, filtering, queueing networks, time series, and statistics. It should be of interest to a broad mathematical audience.

Spatial Deterministic Epidemics Linda Rass, John Radcliffe, 2003 Rass and Radcliffe draw together in one volume mathematical theory which until now has existed only in a large number of papers scattered over many journals. They use rigorous analytic methods to determine the behavior of spatial deterministic models of certain multi-type epidemic processes where infection is spread by means of contact distribution. The results obtained include the existence of traveling wave solutions, the asymptotic speed of propagation, and the spatial final size. For researchers and graduate students working in mathematical methods in biology.

Classical and Modern Branching Processes Krishna B. Athreya, Peter Jagers, 1997 This IMA Volume in Mathematics and its Applications CLASSICAL AND MODERN BRANCHING PROCESSES is based on the proceedings with the same title and was an integral part of the 1993-94 IMA program on Emerging Applications of Probability. We would like to thank Krishna B. Athreya and Peter Jagers for their hard work in organizing this meeting and in editing the proceedings. We also take this opportunity to thank the National Science Foundation, the Army Research Office, and the National Security Agency whose financial support made this workshop possible.

A vner Friedman Robert Gulliver v PREFACE The IMA workshop on Classical and Modern Branching Processes was held

during June 13 17 1994 as part of the IMA year on Emerging Applications of Probability The organizers of the year long program identified branching processes as one of the active areas in which a workshop should be held Krishna B Athreya and Peter Jagers were asked to organize this The topics covered by the workshop could broadly be divided into the following areas 1 Tree structures and branching processes 2 Branching random walks 3 Measure valued branching processes 4 Branching with dependence 5 Large deviations in branching processes 6 Classical branching processes

Conference on Applied Probability and Time Series Analysis Edward James Hannan, Joseph Mark Gani, 1996-08-09 The Athens Conference on Applied Probability and Time Series in 1995 brought together researchers from across the world The published papers appear in two volumes Volume II presents papers on time series analysis many of which were contributed to a meeting in March 1995 partly in honour of E J Hannan The initial paper by P M Robinson discusses Ted Hannan's researches and their influence on current work in time series analysis Other papers discuss methods for finite parameter Gaussian models time series with infinite variance or stable marginal distribution frequency domain methods long range dependent processes nonstationary processes and nonlinear time series The methods presented can be applied in a number of fields such as statistics applied mathematics engineering economics and ecology The papers include many of the topics of current interest in time series analysis and will be of interest to a wide range of researchers

Pliska, 2007 **Case Studies in Bayesian Statistics, Volume II** Constantine Gatsonis, James S. Hodges, Robert E. Kass, Robert E. McCulloch, Peter Rossi, Nozer D. Singpurwalla, 1995-08-10 Like its predecessor this second volume presents detailed applications of Bayesian statistical analysis each of which emphasizes the scientific context of the problems it attempts to solve The emphasis of this volume is on biomedical applications These papers were presented at a workshop at Carnegie Mellon University in 1993

Infinite Dimensional Stochastic Analysis, 1951 *Infinite Dimensional Stochastic Analysis* Philippe Clément, 2000 **Measuring Risk in Complex Stochastic Systems** J. Franke, Wolfgang Härdle, Gerhard Stahl, 2000-06-15 This collection of articles by leading researchers will be of interest to people working in the area of mathematical finance

Case Studies in Bayesian Statistics Constantine Gatsonis, James S. Hodges, Robert E. Kass, Robert E. McCulloch, Peter Rossi, Nozer D. Singpurwalla, 1997-06-05 Like the first two volumes this third volume of case studies presents detailed applications of Bayesian statistical analysis emphasizing the scientific context The papers were presented and discussed at a workshop at Carnegie Mellon University October 5 7 1995 In this volume which is dedicated to the memory of Morris H DeGroot econometric applications are highlighted There are six invited papers each with accompanying invited discussion and eight contributed papers which were selected following refereeing In addition we include prefatory recollections about Morris

DeGroot by James o Berger and Richard M Cyert INVITED PAPERS In Probing Public Opinion The State of Valencia Experience Jose Bernardo who was a scientific advisor to the President of the State of Valencia Spain summarizes procedures that were set up to probe public opinion and were used as an input to the government s decision making process At the outset a sample survey had to be designed The problem of finding an optimal Bayesian design based on logarithmic divergence between probability distributions involves minimization over 21483 points in the action space To solve it simulated annealing was used The author describes the objective of obtaining the probability that an individual classified in a certain group will prefer one of several possible alternatives and his approach using posterior distributions based on reference priors

Robust Bayesian Analysis David Rios Insua,2000-09-14 This edited volume will present an overview of robust Bayesian methods and their applications Chapters will explore both foundational and computational aspects together with applications Chapters concerning foundations will describe decision theoretical axiomatisations leading to the robust Bayesian paradigm and motivate reasons for which robust analyses are practically unavoidable within Bayesian analysis

Robust Planning and Analysis of Experiments Christine Mueller,1997-06-20 Robust statistics and the design of experiments are two of the fastest growing fields in contemporary statistics Up to now there has been very little overlap between these fields This is the first book to link these two areas by studying the influence of the design on the efficiency and robustness of robust estimators and tests The classical approaches of experimental design and robust statistics are introduced before the areas are linked and the author shows that robust statistical procedures profit by an appropriate choice of the design and that efficient designs for a robust statistical analysis are more applicable
