Branelocalized Gravity:

Brane-localized Gravity Philip D. Mannheim, 2005 This timely and valuable book provides a detailed pedagogical introduction and treatment of the brane localized gravity program of Randall and Sundrum in which gravitational signals are able to localize around our four dimensional world in the event that it is a brane embedded in an infinitely sized higher dimensional anti de Sitter bulk space A completely self contained development of the material needed for brane world studies is provided for both students and workers in the field with a significant amount of the material being previously unpublished Particular attention is given to issues not ordinarily treated in the brane world literature such as the completeness of tensor gravitational fluctuation modes the causality of brane world propagators and the status of the massless graviton fluctuation mode in brane worlds in which it is not normalizable
