

Child Brain Development

GOOD NUTRITION LEADS TO MORE STABLE MOODS, INCREASES IN ABILITY TO PAY ATTENTION, AND IMPROVED MEMORY.

LOVING AND CONSISTENT CARE-GIVING LEADS TO A BRAIN THAT HAS AN ABILITY TO LEARN TO DELAY GRATIFICATION, PROBLEM SOLVE, AND HAVE EMPATHY FOR OTHERS.

Brain

Nutrition

Social/Emotional

at birth, the brain has 100 billion brain cells called neurons

the brain grows 1.7 grams a day during baby's first year

60% of an infant's energy intake from food is used for brain growth

babies need loving interaction, touch, and parents that are tuned into their needs, as much as they need nutrition

0-1 years

communication across different regions of the developing brain occurs most rapidly during the first two years of life

by age two, the brain reaches about 75% of adult weight

DHA, an omega-3 fatty acid, and choline, an essential nutrient, are critical building blocks for the developing brain

by age one, infants typically understand about 70 words, but speak only a handful of them

at this age, toddlers become increasingly independent and interested in new things

1-2 years

toddlers have more than 100 trillion cell connections called synapses. At age two, the most they'll ever have in their life.

by age two, the brain structure has the overall appearance of an adult brain

Calcium and vitamin D, which promote calcium absorption, help strengthen bones and teeth.

at 18 months, a toddler's spoken vocabulary starts to expand. They add one new word every two waking hours.

toddlers imitate behavior of others, especially adults and older children

by two years most toddlers have a 300-word vocabulary and are putting together simple two word sentences

2+ years

What's Going on in There? Lise Eliot, 2000-10-03 As a research neuroscientist Lise Eliot has made the study of the human brain her life's work But it wasn't until she was pregnant with her first child that she became intrigued with the study of brain development She wanted to know precisely how the baby's brain is formed and when and how each sense skill and cognitive ability is developed And just as important she was interested in finding out how her role as a nurturer can affect this complex process How much of her baby's development is genetically ordained and how much is determined by environment Is there anything parents can do to make their babies brains work better to help them become smarter happier people Drawing upon the exploding research in this field as well as the stories of real children *What's Going On in There* is a lively and thought provoking book that charts the brain's development from conception through the critical first five years In examining the many factors that play crucial roles in that process *What's Going On in There* explores the evolution of the senses motor skills social and emotional behaviors and mental functions such as attention language memory reasoning and intelligence This remarkable book also discusses how a baby's brain is assembled from scratch the critical prenatal factors that shape brain development how the birthing process itself affects the brain which forms of stimulation are most effective at promoting cognitive development how boys and girls brains develop differently how nutrition stress and other physical and social factors can permanently affect a child's brain Brilliantly blending cutting edge science with a mother's wisdom and insight *What's Going On in There* is an invaluable contribution to the nature versus nurture debate Children's development is determined both by the genes they are born with and the richness of their early environment This timely and important book shows parents the innumerable ways in which they can actually help their children grow better brains Sensory Processing, Perception, and Behavior Robert Burr Livingston, 1978 *Factors of Human Psychology* Lawrence Wooster Cole, 1930 Journal of Comparative Neurology, 1918 **Biological Influences on Criminal Behavior** Gail Scott Anderson, 2007 *Biological Influences on Criminal Behavior* fundamentally questions the way most criminologists attempt to explain let alone ameliorate the problem of human criminal behavior Written by a respected expert in forensics who also brings a much needed biological background to the task this resource champions contemporary biological theory by introducing criminologists to areas of research they might not otherwise encounter It discusses basic biological concepts such as natural selection and evolution in relation to behavior and considers patterns of inheritance sex linked traits and propensities toward aggression explores studies on hormonal effects as well as brain chemistry and delves deeply into

organic brain dysfunction and looks at investigations into fetal conditions and birth related difficulties as well as research on nutrition and food allergies While steeped in scientific research the material does not require a scientific background
