Braindance New Discoveries About Human Brain Evolution:

Braindance Dean Falk, 2004 Falk explains how the act of walking upright permitted brain size to begin increasing dramatically in our early ancestors Her radiator theory demonstrates that once they developed the ability to cool cranial blood through vascular changes associated with bipedalism the constraint that limited brain size disappeared And what did 2 million years of bigger brains produce The last chapter summarizes Falk's ideas on human cognitive and conscious capacities for the future **BOOK JACKET**

The Evolution of Modern Humans in Africa Pamela R. Willoughby, 2007 Pamela Willoughby provides a wide ranging synthesis of current knowledge about the evolution of fully modern humans in Africa during the Middle Palaeolithic Middle Stone Age According to most scholars our modern ancestors first emerged in Africa and then spread throughout the habitable world Willoughby brings evidence from mitochondrial DNA ancient fossils and archaeological remains including her own research in Tanzania to bear on questions regarding the place of human species in nature the specific origins of Homo Sapiens and the dispersal of these modern humans throughout Africa and around the globe She confronts straightforwardly the problems of dating the earliest modern humans and she discusses the various alternative models of modern human origins which will be debated for years to come *The Evolution of Modern Humans in Africa* is a compelling thought provoking book for both students and scholars

Evolutionary Anatomy of the Primate Cerebral Cortex Dean Falk, Kathleen R. Gibson, 2001-04-19 Studies of brain evolution have moved rapidly in recent years building on the pioneering research of Harry J Jerison This book provides reviews of primate including human brain evolution The book is divided into two sections the first gives new perspectives on the developmental physiological dietary and behavioural correlates of brain enlargement It has long been recognized however that brains do not merely enlarge globally as they evolve but that their cortical and internal organization also changes in a process known as reorganization Species specific adaptations therefore have neurological substrates that depend on more than just overall brain size The second section explores these neurological underpinnings for the senses adaptations and cognitive abilities that are important for primates With a prologue by Stephen J Gould and an epilogue by Harry J Jerison this is an important reference work for all those working on brain evolution in primates

Evolution of the Primate Brain, 2012-01-25 This volume of *Progress in Brain Research* provides a synthetic source of information about state of the art research that has important implications for the evolution of the brain and cognition in primates including humans This topic requires input from a variety of fields that are developing at an unprecedented pace genetics developmental neurobiology comparative and functional neuroanatomy at gross and microanatomical levels quantitative neurobiology related to scaling factors that constrain brain organization and evolution primate palaeontology including paleoneurology paleo anthropology comparative psychology and behavioural evolutionary biology Written by internationally renowned scientists this timely volume will be of wide interest to students scholars science journalists and a variety of experts who are interested in keeping track of the discoveries that are rapidly

emerging about the evolution of the brain and cognition Written by internationally renowned scientists this timely volume will be of wide interest to students scholars science journalists and a variety of experts who are interested in keeping track of the discoveries that are rapidly emerging about the evolution of the brain and cognition

Modern Humans John F. Hoffecker, 2017-10-31 Modern Humans is a vivid account of the most recent and perhaps the most important phase of human evolution the appearance of anatomically modern people Homo sapiens in Africa less than half a million years ago and their later spread throughout the world Leaving no stone unturned John F Hoffecker demonstrates that Homo sapiens represents a major transition in the evolution of living systems in terms of fundamental changes in the role of non genetic information Modern Humans synthesizes recent findings from genetics including the rapidly growing body of ancient DNA the human fossil record and archaeology relating to the African origin and global dispersal of anatomically modern people Hoffecker places humans in the broad context of the evolution of life emphasizing the critical role of genetic and non genetic forms of information in living systems as well as how changes in the storage transmission and translation of information underlie major transitions in evolution He also draws on information and complexity theory to explain the emergence of Homo sapiens in Africa several hundred thousand years ago and the rapid and unprecedented spread of our species into a variety of environments in Australia and Eurasia including the Arctic and Beringia beginning between 75 000 and 60 000 years ago This magisterial work will appeal to all with an interest in the ever fascinating field of human evolution

Oxford Handbook of Evolutionary Psychology Robin Ian MacDonald Dunbar, Louise Barrett, 2007 The Oxford Handbook of Evolutionary Psychology is the definitive comprehensive and authoritative text on this burgeoning field With contributions from over fifty experts in the field the range and depth of coverage is unequalled It will be an essential resource for students and researchers in psychology

Chimpanzee Kevin D. Hunt, 2020-08-20 The chimpanzee is one of our planet s best loved and most instantly recognisable animals Splitting from the human lineage between four and six million years ago it is along with its cousin the bonobo our closest living relative sharing around 94% of our DNA First encountered by Westerners in the seventeenth century virtually nothing was known about chimpanzees in their natural environment until 1960 when Jane Goodall travelled to Gombe to live and work with them Accessibly written yet fully referenced and uncompromising in its accuracy and comprehensiveness this book encapsulates everything we currently know about chimpanzees from their discovery and why we study them to their anatomy physiology genetics and culture The text is beautifully illustrated and infused with examples and anecdotes drawn from the author s thirty years of primate observation making this a perfect resource for students of biological anthropology and primatology as well as non specialists interested in chimpanzees
