*Evolving Connectionist Systems* Nikola K. Kasabov, 2007-08-23 This second edition of the must read work in the field presents generic computational models and techniques that can be used for the development of evolving adaptive modeling systems as well as new trends including computational neuro genetic modeling and quantum information processing related to evolving systems New applications such as autonomous robots adaptive artificial life systems and adaptive decision support systems are also covered

**Neuro-Fuzzy Techniques for Intelligent Information Systems** Nikola K. Kasabov, Robert Kozma, 1999-03-29 This volume comprises selected chapters that cover contemporary issues of the development and the application of neuro fuzzy techniques Developing and using neural networks fuzzy logic systems genetic algorithms and statistical methods as separate techniques or in their combination have been research topics in several areas such as mathematics engineering computer science physics economics and finance Here the latest results in the fields are presented from both theoretical and practical point of view The volume has four main parts Part one presents generic techniques and theoretical issues while part two three and four deal with practically oriented models systems and implementations

*Forging New Frontiers: Fuzzy Pioneers II* Masoud Nikravesh, Lofti A. Zadeh, 2007-10-30 The chapters of the book are evolved from presentations made by selected participants at the 2005 BISC International Special Event held at the University of California at Berkely The papers include reports from the different front of soft computing in various industries and address the problems of different fields of research in fuzzy logic fuzzy set and soft computing The book provides a collection of forty four articles in two volumes

**Progress in Connectionist-based Information Systems**, 1998 These two volumes consist of about 350 papers in three main areas of artificial intelligence and neurocomputing namely 1 modelling the brain 2 methods of soft computing 3 applications of intelligent information systems The materials contained in two volumes emphasise the importance of

connectionist based information systems which use neural networks and other methods to achieve intelligent information processing such as speech recognition and language understanding pattern recognition vision learning and adaptation planning and decision making Some of the methods of the connectionist based information systems directly model the physical organisation of the human brain which is the area of brain like computing Other methods model cognitive aspects of human behaviours which is the area of cognitive engineering A third group of methods are based on statistical and probability theory All these methods are presented and applied on concrete problems Many connectionist based systems are described in different papers of the two volumes These two volumes are a comprehensive and up to date guide to the diverse topics of neuro computing artificial intelligence and knowledge engineering
