

Decision Making Process of Drug Users

 Exclusively available on IvyPanda

Introduction

Decision-making is the psychological process resulting in selecting a particular course of action or a belief, among other possible alternatives. The purpose of studying how drug users make decisions is to identify possible ways to help them reduce drug consumption and stop using them completely. The participants in this study are the drug users and the researchers who are trying to gain the knowledge. For a study to be successful, it has to be done on more than one specimen, where in this case it's the drug users. The decisions are the dependent variables, while the drug users are the independent variables in this study. The results will be an important milestone towards the efforts made to curb drug use by encouraging drug users to quit taking them. This research is important because it can help people struggling with drug use to stop eventually. Since people behave differently and react to drugs, a con of this study is that it can be applied successfully to help all drug users. Below is a detailed report on the decision making of drug users.

The cognitive phenomena

Addiction to drugs is a relapsing chronic brain disorder marked by harmful effects in crucial areas of life and obsessive drug-seeking. Decision-making deficiencies in substance-dependent persons (SDI) are widespread, both in life and laboratory, expressed by impaired judgment and carelessness of the repercussions of their decisions.

In humans, the anterior insula in the right brain hemisphere appears to integrate initial experiences into higher-level subjective feelings. Interoception provides a homeostatic function by exciting the individual when there is a suboptimal body's motivational and physiological approach or avoidance action in restoring equilibrium (Verdejo-Garcia et al., 2022). Visceral hunger emotions, for example, may lead to decisions to get and consume food when it is available in the environment, just as visceral drug-seeking experiences may lead to decisions to obtain and use drugs when they are available (Ahn et al., 2014). Such impacts can happen whether or not someone
