Decision Making In Medicine:

Making Medical Decisions Richard Gross,1999 Never before have the powerful techniques of decision analysis had more importance for patient and doctor This book translates the major principles of medical decision making into clinically relevant and easy to understand terms Filled with examples drawn from patient care and familiar games of chance Making Medical Decisions teaches the reader how to feel confident about giving the best advice in the face of the inherent uncertainties of real world medicine Medical Decision Making Alan Schwartz,George Bergus,2008-05-26 Decision making is a key activity perhaps the most important activity in the practice of healthcare Although physicians acquire a great deal of knowledge and specialised skills during their training and through their practice it is in the exercise of clinical judgement and its application to individual patients that the outstanding physician is distinguished This has become even more relevant as patients become increasingly welcomed as partners in a shared decision making process This book translates the research and theory from the science of decision making into clinically useful tools and principles that can be applied by clinicians in the field It considers issues of patient goals uncertainty judgement choice development of new information and family and social concerns in healthcare It helps to demystify decision theory by emphasizing concepts and clinical cases over mathematics and computation **Medical Decision Making** Harold C. Sox,Michael C. Higgins,Douglas K.

Owens,2013-05-08 Medical Decision Making provides clinicians with a powerful framework for helping patients make decisions that increase the likelihood that they will have the outcomes that are most consistent with their preferences This new edition provides a thorough understanding of the key decision making infrastructure of clinical practice and explains the principles of medical decision making both for individual patients and the wider health care arena It shows how to make the best clinical decisions based on the available evidence and how to use clinical guidelines and decision support systems in electronic medical records to shape practice guidelines and policies Medical Decision Making is a valuable resource for all experienced and learning clinicians who wish to fully understand and apply decision modelling enhance their practice and improve patient outcomes There is little doubt that in the future many clinical analyses will be based on the methods described in Medical Decision Making and the book provides a basis for a critical appraisal of such policies Jerome P Kassirer M D Distinguished Professor Tufts University School of Medicine US and Visiting Professor Stanford Medical School US

Decision Making in Health and Medicine M. G. Myriam Hunink,Milton C. Weinstein,Eve Wittenberg,Michael F. Drummond,Joseph S. Pliskin,John B. Wong,Paul P. Glasziou,2014-10-16 Decision making in health care involves consideration of a complex set of diagnostic therapeutic and prognostic uncertainties Medical therapies have side effects surgical interventions may lead to complications and diagnostic tests can produce misleading results Furthermore patient values and service costs must be considered Decisions in clinical and health policy require careful weighing of risks and benefits and are commonly a trade off of competing objectives maximizing quality of life vs maximizing life expectancy vs minimizing the

Decision Making in Health Care Gretchen B. Chapman, Frank A. Sonnenberg, 2000 Decision making is a crucial element in the field of medicine The physician has to determine what is wrong with the patient and recommend treatment while the patient has to decide whether or not to seek medical care and go along with the treatment recommended by the physician Health policy makers and health insurers have to decide what to promote what to discourage and what to pay for Together these decisions determine the quality of health care that is provided *Decision Making in Health Care* first published in 2000 is a comprehensive overview of the field of medical decision making a rapidly expanding field that includes quantitative theoretical tools for modeling decisions psychological research on how decisions are actually made and applied research on how physician and patient decision making can be improved *Decision Making in Health and Medicine*, 2001

Shared Decision Making in Health Care Glyn Elwyn, Adrian Edwards, Rachel Thompson, 2016-07-22 Over the past decade health care systems around the world have placed increasing importance on the relationship between patient choice and clinical decision making In the years since the publication of the second edition of *Shared Decision Making in Health Care* there have been significant new developments in the field most notably in the US where Obamacare puts shared decision making SDM at the centre of the 2009 Affordable Care Act This new edition explores shared decision making by examining from practical and theoretical perspectives what should comprise an effective decision making process It also looks at the benefits and potential difficulties that arise when patients and clinicians share health care decisions Written by leading experts from around the world and utilizing high quality evidence the book provides an up to date reference with real word context to the topics discussed and in depth coverage of the practicalities of implementing and teaching SDM The breadth of information in *Shared Decision Making in Health Care* makes it an essential resource for policy makers and health care workers As health care systems adapt to increasingly collaborative patient clinician care frameworks this will also prove a useful guide to SDM for clinicians of all disciplines **Medical Thinking** Steven Schwartz, Timothy Griffin, 2011-10-04

Decision making is the physician s major activity Every day in doctors offices throughout the world patients describe their symptoms and complaints while doctors perform examinations order tests and on the basis of these data decide what is wrong and what should be done Although the process may appear routine even to the physicians involved each step in the sequence requires skilled clinical judgment Physicians must decide which symptoms are important whether any laboratory

tests should be done how the various items of clinical data should be combined and finally which of several treatments including doing nothing is indicated Although much of the information used in clinical decision making is objective the physician's values a belief that pain relief is more important than potential addiction to pain killing drugs for example and subjectivity are as much a part of the clinical process as the objective findings of laboratory tests In recent years both physicians and psychologists have come to realize that patient management decisions are not only subjective but also probabilistic although this is not always acknowledged overtly When doctors argue that an operation is fairly safe because it has a mortality rate of only 1 % they are at least implicitly admitting that the outcome of their decision is based on probability
