**The Deep Hot Biosphere** Thomas Gold,2013-12-01 This book sets forth a set of truly controversial and astonishing theories First it proposes that below the surface of the earth is a biosphere of greater mass and volume than the biosphere the total sum of living things on our planet s continents and in its oceans Second it proposes that the inhabitants of this subterranean biosphere are not plants or animals as we know them but heat loving bacteria that survive on a diet consisting solely of hydrocarbons that is natural gas and petroleum And third and perhaps most heretically the book advances the stunning idea that most hydrocarbons on Earth are not the byproduct of biological debris fossil fuels but were a common constituent of the materials from which the earth itself was formed some 4 5 billion years ago The implications are astounding The theory proposes answers to often asked questions Is the deep hot biosphere where life originated and do Mars and other seemingly barren planets contain deep biospheres Evenmore provocatively is it possible that there is an enormous store of hydrocarbons upwelling from deep within the earth that can provide us with abundant supplies of gas and petroleum However far fetched these ideas seem they are supported by a growing body of evidence and by the indisputable stature and seriousness Gold brings to any scientific debate In this book we see a brilliant and boldly original thinker increasingly a rarity in modern science as he develops potentially revolutionary ideas about how our world works

**The Truth about Energy, Global Warming, and Climate Change** Jerome R. Corsi,2022-07-26 This book exposes the truth that the climate change hoax is a political movement aimed at eliminating capitalism by spreading alarming disinformation that in order to save the Earth from global warming we must reduce carbon dioxide emissions by switching from hydrocarbon fuels to renewable energies The Truth about Energy Global Warming and Climate Change Exposing Climate Lies in an Age of Disinformation reveals a science based understanding of Earth s climate and temperature that Green New Deal proponents are trying to hide In the pages of this book you will see scientifically documented evidence for many facts that the radical left denies Want to know the truth about how energy temperature and climate work Read The Truth about Energy Global Warming and Climate Change but prepare to be shocked Jerome R Corsi has conducted a tour de force examination of peer reviewed climate science that exposes the neo Marxists behind today s anti capitalist global warming hoax

**Deep Life** Tullis C. Onstott,2016-10-25 The thrilling quest for subsurface life on Earth and other planets Deep Life takes readers to uncharted regions deep beneath Earth s crust in search of life in extreme environments and reveals how astonishing new discoveries by geomicrobiologists are helping the quest to find life in the solar system Tullis Onstott named one of the 100 most influential people in America by Time magazine provides an insider s look at the pioneering fieldwork that is shining

vital new light on Earth's hidden biology: a thriving subterranean biosphere that scientists once thought to be impossible. Come along on epic descents two miles underground into South African gold mines to experience the challenges that Onstott and his team had to overcome. Join them in their search for microbes in the ancient seabed below the desert floor in the American Southwest and travel deep beneath the frozen wastelands of the Arctic tundra to discover life as it could exist on Mars. Blending cutting edge science with thrilling scientific adventure, *Deep Life* features rare and unusual encounters with exotic life forms including a bacterium living off radiation and a hermaphroditic troglodytic worm that has changed our understanding of how complex subsurface life can really be. This unforgettable book takes you to the absolute limits of life: the biotic fringe where today's scientists hope to discover the very origins of life itself.

Carbon in Earth Robert M. Hazen, Adrian P. Jones, John A. Baross, 2018-12-17. Volume 75 of *Reviews in Mineralogy and Geochemistry* addresses a range of questions that were articulated in May 2008 at the First Deep Carbon Cycle Workshop in Washington DC. At that meeting 110 scientists from a dozen countries set forth the state of knowledge about Earth's carbon. They also debated the key opportunities and top objectives facing the community. Subsequent deep carbon meetings in Beijing, China (2010), Novosibirsk, Russia (2011), and Washington DC (2012) as well as more than a dozen smaller workshops expanded and refined the DCO's decadal goals. The 20 chapters that follow elaborate on those opportunities and objectives.

Black Gold Stranglehold Jerome R. Corsi, Craig R. Smith, 2021-05-14. It is estimated that Americans consume more than 25 percent of the world's oil but have control over less than 3 percent of its proven supply. This extremely unbalanced pattern of consumption makes it possible for foreign governments, corrupt political leaders, terrorist organizations, and oil conglomerates to place the citizens of the United States in a stranglehold of supply and demand. There is no greater proof of this than the direct relationship between skyrocketing gas prices and the exploding wealth of those who control the supply of oil. In *Black Gold Stranglehold*, Jerome R. Corsi and Craig R. Smith expose the fraudulent science that has been sold to the American people in order to enslave them: the belief that oil is a fossil fuel and a finite resource. On the contrary, this book presents authoritative research currently known mostly in the scientific community: that oil is not a product of decaying dinosaurs and prehistoric forests. Rather, it is a natural product of the earth. The scientific evidence cited by Corsi and Smith suggests that oil is constantly being produced by the earth far below the planet's surface and that it is brought to attainable depths by the centrifugal forces of the earth's rotation. In great detail, Corsi and Smith explore the international and domestic politics of oil production and consumption. This includes the wealth and power of major oil conglomerates, the manipulation of world economies by oil-producing states and rogue terrorist regimes, and the political agenda of radical environmentalists and conservationists who obstruct the use of oil reserves currently controlled by the U.S. government. The authors offer an understanding of the dangerous situation America faces because its currency is no longer tied to any precious and truly scarce metals such as gold as it was until 1973. This situation could easily lead to the devastation of the U.S. economy if Middle Eastern countries are

able to enact current plans to accept only the Euro or gold backed currencies such as the Gold Dinar instead of the U S dollar as the standard currency for oil Black Gold Stranglehold will dramatically change the debate about oil The significance of its message is sure to cause thoughtful people to reconsider the current dependence of the U S economy on imported oil

Seabed Fluid Flow Alan Judd, Martin Hovland, 2009-06-18 Seabed fluid flow involves the flow of gases and liquids through the seabed Such fluids have been found to leak through the seabed into the marine environment in seas and oceans around the world from the coasts to deep ocean trenches This geological phenomenon has widespread implications for the sub seabed seabed and marine environments Seabed fluid flow affects seabed morphology mineralization and benthic ecology Natural fluid emissions also have a significant impact on the composition of the oceans and atmosphere and gas hydrates and hydrothermal minerals are potential future resources This book describes seabed fluid flow features and processes and demonstrates their importance to human activities and natural environments It is targeted at research scientists and professionals with interests in the marine environment Colour versions of many of the illustrations and additional material most notably feature location maps can be found at [www.cambridge.org](http://www.cambridge.org) 9780521819503 **Whole Earth** ,1999

**Subterranean Ecosystems** Horst Wilkens, David C. Culver, William F. Humphreys, 2000 The types of animals and habitats found in subterranean ecosystems are described together with the geological formations in which they occur and their distribution on earth The ecology of some subterranean terrestrial and aquatic systems are described together with subterranean ecosystems in different climatic zones The nature of the adaptations to life in complete darkness and to the often sparse and patchily distributed foods or various trophic origins are described A central part of the volume deals with the characteristics and process involved in the adaptation speciation and evolution of subterranean animals The volume concludes with a consideration of the conservation issues arising **Applied and Environmental Microbiology** ,2007

Evolution of Hydrothermal Ecosystems on Earth (and Mars?) Gregory Bock, Jamie Goode, 1996-12-24 Offers an exciting look into the possibility of life on Mars Provides an interdisciplinary discussion of the early evolution of life in hydrothermal ecosystems on Earth Presents controversial information comparing ecosystems on Earth and Mars **The Publishers Weekly** ,1998

Exobiology in the Solar System and the Search for Life on Mars European Space Agency, 1999 **The Bulletin** ,2001 **Acta Universitatis Carolinae** ,2001 *Biographical Memoirs* National Academy of Sciences, 2007-01-20 Biographic Memoirs Volume 88 contains the biographies of deceased members of the National Academy of Sciences and bibliographies of their published works Each biographical essay was written by a member of the Academy familiar with the professional career of the deceased For historical and bibliographical purposes these volumes are worth returning to time and again **Discover** ,1999-07 **American Book Publishing Record** ,1998 **Magma to Microbe** Robert P. Lowell, Jeffrey S. Seewald, Anna Metaxas, Michael R. Perfit, 2008-01-14 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 178 Hydrothermal systems at oceanic spreading centers reflect

the complex interactions among transport cooling and crystallization of magma fluid circulation in the crust tectonic processes water rock interaction and the utilization of hydrothermal fluids as a metabolic energy source by microbial and macro biological ecosystems The development of mathematical and numerical models that address these complex linkages is a fundamental part the RIDGE 2000 program that attempts to quantify and model the transfer of heat and chemicals from mantle to microbes at oceanic ridges This volume presents the first state of the art picture of model development in this context The most outstanding feature of this volume is its emphasis on mathematical and numerical modeling of a broad array of hydrothermal processes associated with oceanic spreading centers By examining the state of model development in one volume both cross fertilization of ideas and integration across the disparate disciplines that study seafloor hydrothermal systems is facilitated Students and scientists with an interest in oceanic spreading centers in general and more specifically in ridge hydrothermal processes will find this volume to be an up to date and indispensable resource Choice ,2001
