explain the optimal approach to the solution which includes aspects from graph theory set theory game theory and belief networks This book is accessible to students professionals and researchers in a variety of fields including operations research optimization scheduling theory dynamic programming and game theory Taking account of the distributed stochastic and dynamic variants of the problem this book presents the optimal solution to the fixed interval SRS problem and how to migrate results into more complex cases Reference algorithms and traditional algorithms for solving the scheduling problems are provided and compared with examples and simulations in practical scenarios
