magazines books and on popular web forums are frankly amazing So why bother looking through the eyepiece you ask Well for one thing setting up the equipment is quicker You just take your scope out of the garage or if you re lucky enough to own one open the roof of your observatory align the scope and off you go If you have an equatorial mount you ll still need to roughly polar align but this really takes only a few moments The imager would most likely need to spend more time setting up This would include very accurate polar alignment for equatorial mounts then finding a guide star using his or her finder checking the software is functioning properly and c tinuous monitoring to make sure the alignment is absolutely precise throu out the imaging run That said an imager with a snug obsy at the end of the garden will have a quicker time setting up but then again so will the visual observer
