Decision Tables and Computer Programming Ray Welland,1981 *Decision Tables in Software Engineering* Richard B. Hurley,1983 When one thinks of programming one thinks of programming languages and lines of coding The principles of decision table programming however require very little in the way of coding and language details In the context of software engineering the concern is with a method of problem solving treating a program in small manageable pieces and tying them together with a precise vehicle of communication This book attempts to teach what decision tables are and how to formulate and manipulate them Designed for practicing programmers software designers analysts testers documenters subject matter specialists and computer users who have some programming experience There is very little mathematical content no formal mathematical background is needed **Decision Tables and Computer Programming** Ray Welland, **Decision Table Languages and Systems** John R. Metzner,Bruce H. Barnes,2014-06-20 ACM Monograph Series Decision Table Languages and Systems focuses on linguistic examination of decision tables and survey of the features of existing decision table languages and systems The book first offers information on semiotics programming language features and generalization Discussions focus on semantic broadening outer language enrichments generalization of syntax limitations implementation improvements syntactic and semantic features decision table syntax semantics of decision table languages and decision table programming languages The text then elaborates on design implications decision structure tables spectrum of decision table use and history of decision table programming Topics include feature evaluation method breadth of decision table applicability and suggested design procedure The book also takes a look at sequential test procedures and language references The publication is a vital reference for researchers interested in decision table languages and systems Decision Tables for Computer System Design and Programming Professional Development Seminar,1968 **Decision Tables and Computer Programming** R. Welland,1981-05 Applications of Decision Tables Herman McDaniel,1970 **Programs from Decision Tables** Edward Humby,1973 This book is devoted to a description of the translation of description tables into procedural languages The aim is to encourage their use by giving users a background from which they could better evaluate and therefore cause an improvement in decision table processors Decision Tables for Computer System Design and Programming Association for Computing Machinery,1967* **NBS Special Publication** ,1968 *Conversion of Limited-entry Decision Tables to Computer Programs* Solomon L. Pollack,RAND CORP SANTA MONICA CALIF.,Rand Corporation,United States. Air Force,1964 Decision tables are useful for describing a set of complex decision rules based on given sets of conditions Algorithms that can efficiently covert the tables into computer programs will extend the usefulness of decision tables to computer users This Memorandum describes two such algorithms based on work done by M S Montalbano and extended here to handle dashes and ELSE decision rules The first algorithm minimizes the computer storage space required for the resultant program the second minimizes computer

running time During the conversion process both pinpoint any contradictions or redundancies among the rules in a table A necessary adjunct to minimizing computer storage or running time is the allowable reduction of the number of rules in a decision table This Memorandum describes a technique to effect this reduction for paris triplets and quadruplets of rules The system analyst will find this method most helpful for pairs and generally unprofitable for n tuplets greater than three The technique can be done manually or accomplished by the computer as a prelude to executing one of the two algorithms Author
