properties of rocks that have been affected by high strain zones The discussions range from natural examples at outcrop to microscopic studies They include experiments and numerical models based on the active processes in high strain zones as well as studies on the physical properties of highly strained rocks in the field and laboratory Specific questions addressed include magnetotelluric imaging of faults magnetic fabrics fabric development seismic properties of highly strained rocks change of rheology with strain influence of melt on the localization of deformation the relationship between deformation and metamorphism as well as new methods in the analysis of deformation The book is aimed at an interdisciplinary group of readers interested in the effects of high strain in rocks *Microtectonics* Cees W. Passchier, Rudolph A. J. Trouw, 2005-12-12

Microtectonics deals with the interpretation of microstructures small scale deformation structures in rocks that yield abundant information on the history and type of deformation and metamorphism The results are used by geologists to obtain data for large scale geological interpretations This advanced textbook treats common microstructures such as foliations porphyroblasts veins fringes and shear sense indicators The book mainly focusses on optical microscopy as a tool to study microstructures but also describes other techniques such as EBSD and tomography Many photographs and explanatory drawings clarify the text The new edition substantially revised throughout and extended features two new chapters primary structures and experimental microstructures 68 new figures more than 800 new references *Microtectonics* has proven useful for self study of microstructures and as a manual for short and one semester courses

Impacts and the Early Earth Iain Gilmour, Christian Koeberl, 2000-05-26 Only 10% of the 150 or so known impact craters on Earth date from the early Precambrian Era a time period covering some 88% of the Earth's history Yet this Era encompasses fundamental events in the origin and evolution of our planet from the origin of life itself to the development of continents The papers in this volume

were presented at a workshop sponsored by the European Science Foundation Scientific Network on Impact cratering held in Cambridge UK in December 1998 The papers outline the present state of scientific understanding of the role impacts may have played in the biological and geological evolution of the Early Earth

Scientific Basis for Nuclear Waste Management XXV Materials Research Society. Meeting,2002 This volume opens with a keynote lecture by Rodney Ewing member of the Board of Radioactive Waste Management of the National Research Council Ewing summarizes 25 years of materials research in nuclear waste emphasizing the progress that has been made and the challenges that still confront investigators and technologists in materials science and repository performance evaluation The session is followed by one on container materials and engineered barriers and includes a discussion on the corrosion performance expected for waste packages in the proposed high level nuclear waste repository at Yucca Mountain Nevada Invited papers on performance assessment and repository studies for different national programs are also highlighted with representation from the United States Sweden Japan Belgium Switzerland Italy and the United Kingdom A large number of papers focus on the structure properties and degradation of various waste forms such as glasses ceramics mostly for plutonium immobilization cements and spent nuclear fuel For the second consecutive time the number of papers on ceramics far exceeds those on glass which had been the dominant material discussed at this symposium over the prior 23 years New studies on zirconates confirm the recently discovered high radiation damage resistance of this material Additional topics include performance assessment in high level waste disposal performance assessment in low level waste disposal ceramic structure and corrosion radiation effects in ceramics glass structure and corrosion spent fuel spent fuel cladding and alternative waste forms cements in radioactive waste immobilization contaminant transport natural analogs and waste processing
