Parsons,Robert A. Zaballa,2017-07-26 During the Cold War the United States conducted atmospheric tests of nuclear weapons in the Marshall Islands of the Pacific The total explosive yield of these tests was 108 megatons equivalent to the detonation of one Hiroshima bomb per day over nineteen years These tests particularly Castle Bravo the largest one had tragic consequences including the irradiation of innocent people and the permanent displacement of many native Marshallese Keith M Parsons and Robert Zaballa tell the story of the development and testing of thermonuclear weapons and the effects of these tests on their victims and on the popular and intellectual culture These events are also situated in their Cold War context and explained in terms of the prevailing hopes fears and beliefs of that age In particular the narrative highlights the obsessions and priorities of top American officials such as Lewis L Strauss Chairman of the Atomic Energy Commission **A Guidebook for Teaching Physics** William Yurkewicz,1985 **Physical Science Today** Isaac Asimov,1973 **Quantum Mechanics Ñ What is wrong with it and how to fix it** Janeen Hunt,2007-01-01 This book contains much of the lost history of the development of quantum mechanics The theory is controversial This book explains why by going to the very foundations of Quantum Mechanics directly from the mouths of its inventors the honored and famous scientists It is a telling expos and a serious but almost irreverent treatment of atomic science that tacitly suggests outright fraud blind denial of facts and overly enthusiastic adoption of slanted interpretations of data Although written for those familiar with quantum mechanics it is not written as a technical article but informally for the educated reader It is hard hitting and controversial but researched and well referenced with over 200 quotations from 97

sources Using historical quotations by the founders of QM this book suggests that a different theory of the atom can be and should have been introduced without resorting to assumptions that defy evidence and deny rationality but rather relying on existing empirical data
