Aspects Of Homogeneous Catalysis Volume 3:

Green Catalysis, 2014-04-07 The shift towards being as environmentally friendly as possible has resulted in the need for this important volume on homogeneous catalysis Edited by the father and pioneer of Green Chemistry Professor Paul Anastas and by the renowned chemist Professor Robert Crabtree this volume covers many different aspects from industrial applications to atom economy It explains the fundamentals and makes use of everyday examples to elucidate this vitally important field An essential collection for anyone wishing to gain an understanding of the world of green chemistry as well as for chemists environmental agencies and chemical engineers *Basic Organometallic Chemistry* Ionel Haiduc, Jerry J. Zuckerman, 2011-06-01 No detailed description available for *Basic Organometallic Chemistry* Fundamental Research in Homogeneous Catalysis Y. Ishii, Minoru Tsutsui, 1978-09 Includes index **Inorganic Reactions and Methods, Reactions Catalyzed by Inorganic Compounds** A. P. Hagen, 2009-09-17 For the first time the discipline of modern inorganic chemistry has been systematized according to a plan constructed by a council of editorial advisors and consultants among them three Nobel laureates E O Fischer H Taube and G Wilkinson Rather than producing a collection of unrelated review articles the series creates a framework which reflects the creative potential of this scientific discipline Thus it stimulates future development by identifying areas which are fruitful for further research The work is indexed in a unique way by a structured system which maximizes its usefulness to the reader It augments the organization of the work by providing additional routes of access for specific compounds reactions and other topics **New Pathways for Organic Synthesis** H.M. Colquhoun, J. Holton, D.J. Thompson, M.V. Twigg, 2012-12-06 The continually growing contribution of transition metal chemistry to synthetic organic chemistry is of course widely recognized Equally well known is the difficulty in keeping up to date with the multifarious reactions and procedures that seem to be spawned at an ever increasing rate These can certainly be summarized on the basis of reviews under the headings of the individual transition metals More useful to the bench organic chemist however would be the opposite type of concordance based on the structural type of the desired synthetic product This is the approach taken in the present monograph which presents for each structural entity a conspectus of the transition metal mediated processes that can be employed in its production The resulting comparative survey should be a great help in devising the optimum synthetic approach for a particular goal It is presented from an essentially practical viewpoint with detailed directions interspersed in the Houben Weyl style The wide scope of the volume should certainly encourage synthetic organic chemists to utilize fully the range and versatility of these transition metal mediated processes This will certainly be a well thumbed reference book R A RAPHAEL Cambridge University v Preface In recent years an enormous amount of work has been done on the catalysis of organic reactions by various transition metal species and on the organic reactivity of organo transition metal compounds Metal-Catalyzed Oxidations of Organic Compounds Roger Sheldon, 2012-12-02 Metal Catalyzed Oxidations of Organic Compounds Mechanistic Principles and Synthetic focuses on the

oxidative transformations of functional groups This book explores oxidation as being extensively used in the laboratory synthesis of fine organic chemicals and in the manufacture of large volume petrochemicals Organized into two parts encompassing 13 chapters this book starts with an overview of the mechanistic principles of oxidation reduction in biochemical organic and inorganic systems This text then proceeds with a discussion of the use of molecular oxygen hydrogen peroxide and alkyl hydroperoxides as primary oxidants Other chapters explore stoichiometric oxidations with metal oxidants which include permanganate and chromic acid This book discusses as well the synthetic applications of catalytic oxidations as well as the technology of petrochemical oxidation The final chapter deals with the autoxidations of sulfur phosphorus and nitrogen compounds This book is intended for chemists involved in organic synthesis catalysis and organometallic chemistry both in academic institutions and in industrial laboratories

Catalysis J.A. Moulijn, P.W.N.M. van Leeuwen, R.A. van Santen, 1993-09-09 Catalysis is a multidisciplinary activity which is reflected in this book The editors have chosen a novel combination of basic disciplines homogeneous catalysis by metal complexes is treated jointly with heterogeneous catalysis with metallic and non metallic solids The main theme of the book is the molecular approach to industrial catalysis In the introductory section Chapter 1 presents a brief survey of the history of industrial heterogeneous and homogeneous catalysis Subsequently a selection of current industrial catalytic processes is described Chapter 2 A broad spectrum of important catalytic applications is presented including the basic chemistry some engineering aspects feedstock sources and product utilisation In Chapter 3 kinetic principles are treated The section on fundamental catalysis begins with a description of the bonding in complexes and to surfaces Chapter 4 The elementary steps on complexes and surfaces are described The chapter on heterogeneous catalysis 5 deals with the mechanistic aspects of three groups of important reactions syn gas conversion hydrogenation and oxidation The main principles of metal and metal oxide catalysis are presented Likewise the chapter on homogeneous catalysis 6 concentrates on three reactions representing examples from three areas carbonylation

polymerization and asymmetric catalysis Identification by in situ techniques has been included Many constraints to the industrial use of a catalyst have a macroscopic origin In applied catalysis it is shown how catalytic reaction engineering deals with such macroscopic considerations in heterogeneous as well as homogeneous catalysis Chapter 7 The transport and kinetic phenomena in both model reactors and industrial reactors are outlined The section on catalyst preparation Chapters 8 and 9 is concerned with the preparation of catalyst supports zeolites and supported catalysts with an emphasis on general principles and mechanistic aspects For the supported catalysts the relation between the preparative method and the surface chemistry of the support is highlighted The molecular approach is maintained throughout The first chapter 10 in the section on catalyst characterization summarizes the most common spectroscopic techniques used for the characterisation of heterogeneous catalysts such as XPS Auger EXAFS etc Temperature programmed techniques which have found widespread application in heterogeneous catalysis both in catalyst characterization and simulation of pretreatment procedures are discussed in Chapter 11 A discussion of texture measurement theory and application concludes this section 12 The final chapter 13 gives an outline of current trends in catalysis Two points of view are adopted the first one focusses on developments in process engineering Most often these have their origin in demands by society for better processes The second point of view draws attention to the autonomous developments in catalysis which is becoming one of the frontier sciences of physics and chemistry In this book emphasis is on those reactions catalyzed by heterogeneous and homogeneous catalysts of industrial relevance The integrative treatment of the subject matter involves many disciplines consequently the writing of the book has been a multi author task The editors have carefully planned and harmonized the contents of the chapters

Fundamental Research in Homogeneous Catalysis M. Tsutsui, 2012-12-06

During the 70 s it has become drastically apparent that our natural resources including energy are not in unlimited supply This realization is strongly felt in the economic turmoil that is occurring but its effects will penetrate into other areas even causing moderate social changes Chemists play a major role in converting the world's natural resources into products The public consumes these products and

now depends upon them to keep the high standard of living to which they have become accustomed This topic could easily be expounded into a whole article but it is sufficient to say that almost everything from the use of lightweight strong polymers which are replacing the use of metals in today's automobiles to the curing of diseases with asymmetrically synthesized drugs is related to the endeavors of chemistry Catalysts have played a major role in transforming resources to useful products Since a catalyst lowers the activation energy required for a particular reaction and often for only one specific pathway where normally many exist it is not surprising within the extant climate that researchers are now increasing their efforts and focusing their priorities on improving and discovering more efficient and selective catalysts

Catalysis C. Kemball, D. A. Dowden, 2007-10-31 There is an increasing challenge for chemical industry and research institutions to find cost efficient and environmentally sound methods of converting natural resources into fuels chemicals and energy Catalysts are essential to these processes and the *Catalysis Specialist Periodical Report* series serves to highlight major developments in this area This series provides systematic and detailed reviews of topics of interest to scientists and engineers in the catalysis field The coverage includes all major areas of heterogeneous and homogeneous catalysis and also specific applications of catalysis such as NO_x control kinetics and experimental techniques such as microcalorimetry Each chapter is compiled by recognised experts within their specialist fields and provides a summary of the current literature This series will be of interest to all those in academia and industry who need an up to date critical analysis and summary of catalysis research and applications Catalysts will be of interest to anyone working in academia and industry that needs an up to date critical analysis and summary of catalysis research and applications Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research Compiled by teams of leading experts in their specialist fields this series is designed to help the chemistry community keep current with the latest developments in their field Each volume in the series is published either annually or biennially and is a superb reference point for researchers www.rsc.org
